Ag Official Sounds Off on Dairy Health

The Great Milk Mystery (or Who's Responsible for What) was still something of a mystery when Mrs. Jane Alexander ended her speech to a crowd of farmers on Tuesday at Lancaster County Dairy Day. The title of her speech, she noted, had been chosen more by whimsey than logic, but she did have something to say about milk. And when she sat down, there was no doubt in anyone's mind that Mrs. Alexander was very much concerned about the dairy health situation in the county.

Mrs. Alexander is a York County attorney and a former member of the Pennsylvania House of Representatives, currently serving as Pennsylvania's deputy secretary of agriculture. She was the leadoff speaker for the afternoon portion of the dairy day program. "The Department of Agriculture's animal indemnity funds are going to be wiped out for the remainder of the year because we have to depopulate several large Pennsylvania herds," Mrs. Alexander told the group.

"That money goes pretty fast when you have to put down 180 cows in one herd alone," she said. "Because of problems like this, we in the Department of Agriculture have decided - and it was a tough decision to make - that we're not going to depopulate herds animal by animal in heavily infected areas. We're going to come in and clear out the whole herd, and we're going to keep animals off the farm for a year."

"We're also considering some new regulations. One that we'll probably adopt is to not allow indemnity for farmers who've added cows

to their herds after they've been notified that they're in trouble."

Some of the problem herds, Mrs. Alexander said, are in Lancaster County.

In her speech, Mrs. Alexander also said the ag department is considering another hearing on the seven-day milk dating rule. This is the rule that says milk must be removed from food store shelves after seven days. The law also requires that the date of removal be stamped on individual milk containers. "Since we've started the seven-day rule, we've had far fewer complaints about milk quality," Mrs.

Alexander said. "We've found that retailers are taking better care of milk and consumers are more often getting a top quality product. But let's face it. Milk lasts longer than seven days, and why should we mandate the destruction of good product? Especially when food is short. We have whipped some of the problems, so we'll be considering an increase in the seven-day rule."

Mrs. Alexander also touched on sanitation on the dairy farm. "We urge our milk inspectors to work with farmers in solving their problems. Usually, when we

Marcia Rohrer

Mt. Joy 4-H Teen Leader

by: Melissa Piper

During the 4-H season, it may be hard to find Marcia Rohrer, a Manheim R2 miss, for activities keep her busy all the time.

If she's not at the barn walking her steer or conditioning her sheep, a search may find her in the kitchen whipping up a batch of icing for her next cake decorating fete or sewing the finishing touches on a new dress. And if all else fails, you'll probably find her working as a teen leader in the Mt. Joy Community 4-H Club.

Marcia, who is the daughter of Mr and Mrs Jay Rohrer, is a sophomore at Manheim Central High School and has been a active Lancaster County 4-H member for the past four years.

A member of the Red Rose Baby Beef and Lamb club Marcia has taken several steer projects and has also raised market lambs. Marcia has shown her steers and lambs at the Manheim Farm Fair and the Farm Show.

[Continued on Page 14]

Marcia Rohrer, Manheim R2, has been involved with many 4-H activities. One project that she especially enjoys is cake decorating. *

A group of Filipino 4-H'ers viewed the manure drying facility at Pennfield Corp.'s egg production operation near Ephrata. The Filipinos are all in

this country to take part in a two-year program of training and work experience.

Philippine 4-H'ers Tour Farms Here

A group of 20 Philippine 4-H'ers spent four days in Lancaster County this week touring farms and agribusiness concerns as part of a two-year agricultural training program organized by the National 4-H Foundation in Washington.

The Philippine Agricultural Training Program was created in May of last year as part of a long-term Philippine government program to increase food production in that country. The coordinator for the program is John Pederson, of the National 4-H Foundation. Pederson, who accompanies the group on field trips, told Lancaster Farming on Monday, "This program is similar to others which bring in 4-H'ers from Korea, the Republic of China and Turkey. Everyone of the kids who comes here has a farm background. And when they go back home, most of them go into farming."

The Filipinos, when they get home, will be able to

obtain \$19,000 loans to begin a farm enterprise. "That won't buy any land," Pederson noted, "because in the Philippines even sloping land brings \$1500 an acre. But the loans will get these young farmers off to a good start with equipment and supplies. They will probably buy land cooperatively."

Egg Producers Criticize Urner-Barry Quotations

A largely hostile group of eggmen queried John Carter and Frank Urner on Thursday night about the egg price which is published daily by New York's Urner-Barry Corp. This egg price, which goes by subscription to egg brokers, packers, producers and chain store buyers, is the benchmark which guides price setting in much of the nation's egg market. In addition to their regular subscribers, Carter pointed out, there are also

two newspapers in the U.S. which carry the Urner-Barry egg price. Lancaster Farming is one of those.

"Why don't you set your price so it shows what the egg producer is really getting?" one poultryman asked. "I never get anywhere near the price you quote. Why is that?"

Ordinarily, the price to producers is set by buyers at a figure such as 12- to 14-cents "under the market", or the Urner-Barry quote.

Store door delivered eggs may be priced at or just under the market. This pricing mechanism is used almost universally in the East and quite extensively east of the Rockies. West Coast eggs are commonly quoted on the basis of a USDA store door delivery price.

Carter explained to the questioner that the Urner-Barry price was a base quotation meant to be used

IMPORTANT NOTICE

LET US HANDLE
YOUR FEEDER PIGS

NEXT FEEDER PIG SALE TUES., MARCH 18

Feeder pigs consigned to Walter M. Dunlap and Sons must arrive at the stockyards between 7 A.M. and 11 A.M. the day of the sale. Upon arrival they will be inspected by a veterinarian, tagged, and state graded.

The two sales scheduled for March will be held on Tuesday, the 4th, and Tuesday, the 18th, starting at 1 P.M. Consignors wishing to tag their pigs on the farm can get the tags at the state office at the stockyards, not later than 4 P.M. any day preceding the sale, thereby saving 25 cents per pig.

Consign all your feeder pigs to Walter M. Dunlap & Sons where they will be handled by a capable and experienced staff, and for further information call 717-397-5136.

PENNFIELD'S UNI-PEL DAIRY FLAKES SMELL

... but good!

Pennfield Uni-Pel Flakes No. 522 is a coarse textured dairy feed that smells and tastes delicious. And, because it is so extremely palatable, your herd will consume more—and produce more. It's an appetizing blend of steamed, flaked corn, crimped oats, molasses and pellets that are a highly concentrated source of nutrients. Uni-Pel has the right amount of Sodium Bicarbonate that helps maintain high milk-fat tests.

Call Pennfield today and discuss your feeding needs with a Pennfield feeding expert. Uni-Pel just may be what you need. Your herd will love it. So will your profits.

MARCH 10-16, 1975

Tether your kite in this weather.

Repair your screen, mend your rakes, and sharpen your saws now . . . J. P. Morgan died March 13, 1943 . . . New moon March 12 . . . Skunks mate now . . . Average length of days for week, 11 hours, 18 minutes . . . Romeo married Juliet this week in 1302 . . . Some Robins and crows are back north now . . . Telephone first used March 10, 1876 . . . Borrowed clothes just never fit.

The kaboodle is an alliterated form of "buddle" — the contents.
Home Hint: Toys and small objects won't drop through furnace registers in the floor if you affix a piece of window screen to the underside of the grating.

OLD FARMER'S WEATHER FORECASTS

New England: Fog and drizzle to start, then rain; end of week mostly clear and cold.

Greater New York-New Jersey: Rain at first, then clearing and becoming cold; clear and cold latter part.

Middle Atlantic Coastal: Week begins rainy, then snow in west and cold; weekends clear with warm days and cold nights.

Southeast Coastal-Piedmont: Light showers to start, then fair and cold; clear and sunny latter part.

Florida: Partly sunny at first, then scattered showers; end of week cold and rainy with possible snow in north.

Upstate & Western N.Y.-Toronto & Montreal: Rain changing to snow to start, then very cold; some clearing and seasonably cold latter part.

Greater Ohio Valley: Week begins cold with flurries, then heavy snow in mountains, end of week clear and mild in west but colder in east.

Deep South: Early week rainy in northwest and central, and light snow in north and east, then clear and frosty; end of week clear and cold.

Chicago & Southern Great Lakes: Snow to start, then clearing and very cold; sunshine and warmer latter part.

Northern Great Plains-Great Lakes: Early week clear and unseasonably cold, end of week still clear but mild.

Central Great Plains: General light snow at first, then clearing and cold; end of week clear and mild.

Texas-Oklahoma: Cold snap to start with light snow in north, then some hard showers in east and along Gulf; rain ending latter part, clearing and mild.

Rocky Mountain Region: Clear and seasonable at first, then showers in south; end of week rainy in central and north.

Southwest Desert: Light showers in south and east about mid-week but clear and warm in northwest; end of week generally clear and quite warm.

Pacific Northwest: Most of week clear and mild; heavy rain and colder latter part.

California: Early week cloudy and cool; end of week overcast in south and light rain in north.

Non-Farmers Seen Lacking Knowledge Of Farm Realities

The American non-farming public lacks an understanding of how food is produced, the Northwest Pennsylvania Feed Dealers were told last week in Greenville.

Ernest F. Bond, animal feeds sales representative for American Cyanamid Company, told his audience,

"The non-farming public, representing about 95 percent of our population, and the farmer need to be fully acquainted if we are to continue to have high-quality food."

Farmers have available to them today safe and effective ways and means to control and stimulate nature

so that our food is better and cheaper than anywhere in the world, Bond pointed out.

"Science and technology comes to the farm in the form of improved feed and seed, modern fertilizers, highly sophisticated plant growth chemicals, insecticides, herbicides, and animal health products," he added.

Citing a foreword to a recent report by the Committee on Agriculture, U. S. House of Representatives, that the Committee feels its basic responsibility is to maintain the nation's food

and fiber output, Mr. Bond said, "Our farmers are producing. They are charged with providing food and fiber for today's 202 million Americans and have the capability of meeting the needs of the expected 300 million population of the U. S. by the year 2000."

Citing growing pork consumption, Mr. Bond noted that there will be a good long-range market for U.S. pork in Japan. "It is expected that pork consumption will double in five years. With 107 million people in Japan, that would mean Japan alone would

import 1.4 billion pounds of pork," he said.

Pork in the U. S. today reaches the consumer fresher, with better quality and undergoes more inspection than any other country, the speaker said. "This production

capability can continue only if the American farmer receives enough support for his crops and livestock to use modern machinery and technology, insecticides, pesticides and other things to maximize production," Bond added.

Consumers' Corner

FURNITURE GUIDELINES
New guidelines for the furniture industry have been issued by the Federal Trade Commission. As a result consumers should be better able to know what they are viewing when they browse for furniture.

The guide demands detailed disclosure of furniture materials. Manufacturers are now required to reveal if plastic, vinyl, or marble dust is used to simulate wood, leather, or marble. If constructed with veneer, a furniture piece must be labeled as such.

A major provision of the guide is aimed at eliminating the common retail practice of removing manufacturer's tags and labels, which tell information about construction and composition of the furniture.

Terms such as Chinese Chipendale, Mediterranean and French Provincial are permitted to describe furniture styles. However, unqualified names of countries may not be used. For example, Danish-style furniture, manufactured in the U.S., may not be labeled "Danish." Instead, it must be described as "Danish-style."

Furniture advertisers' claims must be backed by testing which is run by qualified individuals. Generalizations about such testing must be displayed in terms easily understood by the consumer.

Reader's Corner

Chiques Creek Project Explained

Contributions to Lancaster Farming's "Reader's Corner" are welcome. The article that follows was written by Wendi List, a senior environmental studies student at Manheim Central.

Many years ago there was a wind that swept across the state of Pennsylvania and deposited a seed deep in the earth of Lancaster County. As the seed matured, its roots permeated the soil and made it fertile and fruitful. A man and his family then settled on this land and farmed it, he called himself a farmer. This fertile soil, the seed of agriculture, became a vital resource to the farmer and the nearby community that had since settled there, for through its fertility it provided the countrymen with food, clothing, shelter and security. Historically, the community depended on the farmer, and the farmer was dependent on the community.

Manheim developed as such a community. It was a small town surrounded by abundant farm land and protected by the people who depended on it. This interaction between the farmers and the community is a stable relationship even today. It is largely responsible for the organization of the Chiques Creek Watershed Project, for damages to both farm land and borough properties led to the initial movement of this existing environment project.

What is a watershed association such as the one beginning in Manheim? The

definition of such an organization is very simple, however, the implications of such an association are rather complex. First of all, a watershed comprises all the land that is drained into a specific stream or river. In Manheim, we are speaking of the Chiques Creek and the Rife Run tributary. The watershed association is entirely a local project, not a government project, with as little political procedure as possible. It is an active organization made up of the people who live where the problems exist. They are concerned individuals who realize we must not exploit our environment, but protect it from the deterioration that has existed for over two hundred years. We can no longer do what our ancestors have done when faced with the depletion of their resources: abandon our farms and homes and pioneer new lands. Too many people are gambling with the environment we presently occupy, and not enough people are striving to preserve it. An environment is a vulnerable process, if it is healthy and pleasant, just introduce a corrupting species and its natural balance will easily be destroyed by the human, animal and industrial wastes that contaminate its waters and soil, by the erosion and run-off when it blocks streams with the deposition of sediment, and by the indiscriminate commercial and residential development that defaces all aesthetic values. There will also exist the inability for the environment to support

wildlife and to store adequate water supply. The association functions to overcome the deterioration and protect our own interests and those of our descendants.

The watershed project is working to conserve our natural resources, to practice good environmental stewardship. It functions throughout the natural boundaries of the watershed, which could drain only a few hundred acres or many square miles. The area involved in our study is Manheim and northern Lancaster-Lebanon County. This is approximately 250,000 acres located above the present White Oak Dam, north of Manheim.

When the project was first undertaken, our basic challenge was erosion, flooding, and the protection of the flood plain, on which Manheim directly lies. The Manheim Borough Council first submitted an application appealing for assistance under the Watershed Protection and Flood Prevention Act to Pennsylvania's State Soil and Water Conservation Commission. The program's objectives were to prevent flood damage and to improve economic lease. The type of watershed treatment would be dam sites, and technical assistance was believed to be needed. There are many agencies and available help which can deal with the complex organization of a watershed association.

However, today the protection of our vital resources is so urgent, for every day the increasing population makes more demands on our environment, that the problems often exceed the scope of the agencies. The agency's power is often hindered by political restrictions and the

problems do not stop, for they have no political boundaries. Neither does an association to any great extent and it is for this reason that a citizens' action is more effective, and the agencies are only used for technological knowledge and for counseling.

Manheim Borough first held a public meeting before the submission of the application. This is a most important step in any organization, for its success is in direct proportion to the amount and degree of public involvement. At present the project is co-ordinating a conservation education program, involving environmental students. Students write news articles, some are constructing models of the watershed, others are collecting data such as water quality analysis, flow measurements, water table records, etc. A lot of this work is done by chemistry students. Students in the environmental class of Mr. Flick and Mr. Wenger at Manheim Central High School, were involved in a field trip to collect data for a county-wide survey on the Chiques Creek, material that will certainly be used for the association's educational goals.

The approach of the educational program is completely constructive, it is for improvement, a broad educational crusade. Hurricane Agnes was the decision-making event for this project. It clearly demonstrated the flood situation during the summer of 1972. The total damage cost was approximately 1.5 million dollars. These damaging floods must not continue. We must place proper checks on our environment or suffer the consequences.

YOU REAP WHAT YOU SOW, EVEN DURING A FERTILIZER SHORTAGE.

You count on a lot of things to give you a good return. From expensive farm equipment to the right amount of sunshine. But this year more than any other, your fertilizer investment is going to make the difference.

Right now we're all struggling against the fertilizer shortage. So the quality you use becomes even more important than the quantity. And Royster is doing something to help you get the best.

There's still no way we can promise you'll get all the fertilizer you want. But this year, we're manufacturing more Bonanza Crop Specials. It's our finest fertilizer. And it's your insurance that you'll get the greatest return on every dollar invested.

Bonanza Crop Specials are supercharged with specific

micronutrients. Because some crops use higher amounts of one or more micronutrients than others. And sometimes an area is deficient in certain micronutrients. That's why we make Specials for every major crop in every market we serve. And that's 13 crops in 20 states.

Our Bonanza Crop Specials are such a valuable investment we even wrote a booklet about them. To get yours, write Marketing Services, P.O. Drawer 1940, Norfolk, Virginia 23501.

Or better still, visit your friend in the fertilizer business. Your Royster dealer. He'll help you make a good fertilizer investment. Because he knows when you put good things into your land, you expect good things back.

Farm Commentary

by Dick Wanner

Dairy Health Problem

Like many speakers, Jane Alexander started on a light note at Lancaster County Dairy Day on Tuesday afternoon. But Pennsylvania's Deputy Secretary of Agriculture stopped smiling when she began talking about herd health. And her voice shook, it seemed to us, when she got to the subject of Lancaster County herd health.

"The Department of Agriculture's funds for animal indemnification are just about wiped out because of dairy cow condemnations," she told the audience. "There's a chance that we're going to have to depopulate a Lancaster County herd of 180 cows. Indemnification money doesn't last long when you're dealing with that kind of problem."

Later in the day, we talked to Dr. Everett Denlinger, the Lancaster County veterinarian who heads up the Department of Agriculture's Bureau of Animal Industries. He told us that there are ten quarantined herds in Lancaster County. Five of those, including the one Mrs. Alexander referred to, are restricted because of brucellosis. Three are quarantined for para-TB, and two for TB.

Dr. Denlinger said that there are presently 19 herds quarantined with brucellosis in the entire state, up from just seven a year ago. And he said that his department has noted an increase in the number of brucellosis vaccinations being carried out in the past six months.

Is Lancaster County a hotbed of dairy disease, we asked Dr. Denlinger. "We're keeping a close watch on the county, but considering the number of cows here, I don't think the percentage is any higher than it is in the rest of the state. We're concerned now because we don't want it

to become a real problem."

Dr. Denlinger said the condition here is aggravated by free stall barns with dirt floors, the vast number of dairy cattle locally and the swapping back and forth of cows between neighbors, friends and relatives.

In the large herd with 180 animals, some 50 cows have been removed so far. An unconfirmed report said that the herd was healthy a short while ago. The owner sold about 20 head into an out-of-state herd, then brought them back some months later. The cows did not have up-to-date health certificates when they were brought back, and they were not quarantined when they rejoined the herd. They brought brucellosis back with them and infected their herdmates.

In her speech, Mrs. Alexander said that the department is considering some changes in the regulations concerning indemnity funds. The thrust of her message was that dairymen whose herds became infected through carelessness might not be able to get indemnity.

The message is clear. There's a dairy health problem in Lancaster County. Certainly, 10 infected herds out of 2000 is no epidemic, but it is cause for alarm. Dairymen must be extremely careful about bringing new cows into their herds. Cows should only be bought if they have valid health certificates, and even then they should be kept separate from the rest of the herd for 30 days.

Under any circumstances, sending an entire herd to the butcher cannot be a pleasant experience. But if, through carelessness, a farmer loses his right to collect indemnity for infected cows, the experience could be more than unpleasant. It could be disastrous.

Unemployment Blues?

Lou Moore, in his speech to a group of Lancaster County poultrymen on Thursday night, started off with a story about a man who threw a bull across a fence. Happily, though, the bull throwing story was not in any way symbolic of the content of Moore's speech.

We had second thoughts, though, when Moore said out-of-work vacationers were so thick in Florida this year that state policemen were standing on the highways asking southbound tourists to turn around and go home. Moore's credibility was rescued by the corroborating testimony of a member of the audience who'd just returned from the Sunshine State.

This curious anomaly of hard times in America, Moore said, was brought

about by unemployment compensation which actually boosted the take home pay of many who lost jobs because of the double-barreled assault on the economy by both inflation and recession. Some workers are drawing as much as 95 percent of their base wages. Since unemployment payments aren't taxed, these workers are getting more than they were getting as wage earners.

"So a lot of these people weren't especially hurt financially. And they figured since they had the free time, they might as well go to Florida. And when they got there, they ran into a lot of people who were still working. The people who have jobs this year figured they'd better take their vacations and go to Florida while they can still afford it."

From the Mail

One thing we like about our readers is their candor. One new subscriber this week told us he decided to subscribe after coming across a copy of the paper in somebody's garbage can. For his sake, we hope the paper wasn't wrapped around anything before he decided to read it.

Another new reader was in-

troduced to the paper by his chicken salesman. And this week for the first time, we'll be sending a paper to Hangover Farm in Bangor, Pa. And oh, yes, a special welcome this week to new subscriber Richard A. Rohrer, Kodiak, Alaska. Richard, we understand, has discovered a great way to make frozen strawberries. He just leaves 'em on the vine until August 1

THE WOUNDED HEALER

Lesson for March 9, 1975

Background Scripture: Hebrews 2:10 through 5:14.
Devotional Reading: Philippians 2:1-11.

Somewhere I have heard it said that "the wounded healer" is often best able to heal the brokenness of others. A physician who has experienced disease personally is more likely to be effective in bringing recovery to his patients. A counselor who has personally had to work through momentous problems of his own is more likely to be helpful in assisting others to work through theirs.

Another's moccasins

If we are to help other people, we must be able to understand them. And in order to understand them we ought to be able to put ourselves in their place. An old Indian saying tells us that we cannot rightly judge another man until we have walked ten miles in his moccasins.

Following this philosophy, a valuable tool often used in problem-solving with people is a device called "role playing." People are asked to act out in an impromptu manner the "role" of another person so that the "actor" may experience that other person "from the inside." For example, a mother and daughter experiencing conflict over parental rules and regulations may be asked to "reverse their roles," the mother trying to act the role of the daughter and the daughter assuming the role of the mother. Often great understanding comes from these experiments and relationships are healed.

Another reason for the healing power of the "wounded healer" is the greater likelihood that we will respond favorably to someone who has "been where we are." The comforting attempts of someone who has personally known grief are usually more convincing to us. This is why rehabilitated handicapped people are sent to try to help others with disabilities, why "ex-cons" are often sent to work with prison inmates, and former mental patients sent back to mental health facilities to work with the emotionally disturbed.

Tempted as we are

It is also for these same reasons that the Epistle to the Hebrews exalts Jesus as our exalted "high priest." As the writer puts it:

For we have not a high priest who is unable to sympathize with our weaknesses, but one who in every respect has been tempted as we are, yet without sin. (Hebrews 4:1)

This is a crucial teaching, for some people think of Jesus in such exalted terms that he is seen as personally irrelevant. Dwelling on his perfection and divinity, some people feel that a person so removed from the common temptations and experiences of men could hardly be of much help. How, they reason, could the Son of God know what it means to

NOW IS THE TIME...

County Agr. Agent
Telephone 394-6851

To Spray for Garlic

Pastures infected with wild garlic should be sprayed during March for best control. The application of 2-4, D (Ester form) before the clover starts to grow should keep the wild garlic plants from maturing. The goal is to spray and kill the garlic plants when they are small. Later in the spring the garlic plants will be harder to kill and any clover in the pasture will be injured. Wild garlic is a major milk flavor problem on many dairy farms and effort should be made to eradicate the weed.

To Withhold DES Hormone

I have recently been informed that as of March 16, 1975, cattle feeders will have to certify that slaughter cattle have not been fed any stilbestrol hormone (DES) for at least 14 days. Therefore, cattle feeders need to respect this regulation and feed their cattle accordingly. This same regulation was in effect about two years ago, but was discontinued when sufficient evidence was not available. The restriction was imposed because of the danger of residue in the meat tissues. Feeders should check with their marketing concern.

To Protect Pastures

Grazing areas are very soft and muddy this time of the year. Livestock should not be allowed to run on the area because they will tramp holes in the sod and retard spring growth. Grass plants should be fertilized within the next month and given a chance to get several inches of growth before being grazed. A pasture that is given good care in the spring should produce more forage for the rest of the season.

To Seed Early

Some crops will do better when seeded just as early in the spring as weather permits. I'm referring to spring oats, pastures, and new seedings of alfalfa. All of these should be seeded just as quickly as the ground is dry enough. In this area spring oats must be seeded by the first week in April if any decent yield is expected; they need maximum growth and maturity before hot weather arrives. The grasses and alfalfa need to get as much growth and root development as possible before the weather turns hot and dry. All materials and equipment should stand ready to plant at the earliest opportunity.

Farm Calendar

Tuesday, March 11

5:30 a.m. - Lancaster County Holstein Assoc. annual tour. Buses leave from Farm and Home Center. Return Wednesday.

Wednesday, March 12

1975 4-H Expo, Park City Mall, Lancaster. Continues through March 15.

7:30 p.m. - Home vegetable gardening meeting, Lancaster Farm and Home Center.

7:30 p.m. - Chester Co. dairy meeting on sire summaries and evaluations. Central Chester Co. Voc-Ag School, Lincoln Highway, East of Coatesville.

7:30 p.m. - Garden Spot adult farmer meeting on farm taxes, Hinkletown Alternative School.

struggle against life's temptations? How could a man of so many miracles know what it means to be hungry, helpless, or grief-stricken?

Still, that is what the writer of Hebrews is telling us. Just as the human priest must be understanding and merciful because of his own weaknesses, so God's great high priest, Jesus Christ, has shared the full limitations of our humanity, even dying on a cross in abject pain and rejection.

With that kind of "wounded healer," says Hebrews: "Let us then with confidence draw near to the throne of grace, that we may receive mercy and find grace to help in time of need."

Thursday, March 13

9:30 a.m. - Farm estate planning seminar, Timbers Restaurant, Quakertown.

6:30 p.m. - Lancaster County Conservation District annual banquet, Good 'n Plenty Restaurant.

7:30 p.m. - Workshop on farm transfers and partnerships, Lancaster Farm and Home Center.

7:30 p.m. - Elizabethtown Young Farmer machinery meeting, E-Town H.S. ag classroom.

Friday, March 14

9:30 a.m. - Farm estate planning seminar, Holiday Inn, Lionville.

6:45 p.m. - Manheim FFA banquet, Manheim Central H.S. cafeteria.

Monday, March 17

7:30 p.m. - Lancaster County goat meeting, Dr. Samuel Guss, speaker, Lancaster Farm and Home Center.

Tuesday, March 18

9:30 a.m. - Farm financial management clinic, Lancaster Farm and Home Center. Continues through Wednesday.

10:10 a.m. - Montgomery County Dairy Day, Collegeville Inn.

Letters to the Editor

A Bullock is a Steer is a Bull

castrated male bovine. Are they not the same?

J. P. Monk
Bethel, Pa.

Editor:

In your reports of livestock auctions, you list "slaughter steers", "bullocks", and "bulls". Kindly tell me the difference between "bullocks" and "steers".

In our dictionary, a bullock is defined as a castrated bull, and a steer is defined as a

Our dictionary defines a bullock two ways, either as a castrated animal of any age, or a young bull. So, a bullock can be the same as a steer, but it is not always thus. We checked with Jim Anderson, with the USDA's Market Reporting Service at the

Liked the Poem

I want to tell you how we enjoyed the poem "Newborn Bull Calf" in the March 1 issue. I read it to my sons at breakfast this morning and we laughed and laughed till we couldn't see anymore. You may keep up the "Readers Corner" as far as we are concerned.

I'm a dairyman's wife and know all about teaching calves to drink from a bucket, and the poem was all so true. I'm sure the calves are lucky if the farmer's wife teaches them to drink, because she usually has more patience.

Mrs. K. W. Blatt
Jonestown

PLAIA Committees Announced

Donald W. Parke, Lancaster, President of the Pennsylvania Livestock & Allied Industries Association announced the appointment of several standing committees at a recent meeting of the board of directors. The state-wide association represents all species of livestock and all phases of the industry from producer to marketer. It co-sponsors the Keystone Livestock Exposition with the Pennsylvania Department of Agriculture.

Parke challenged committee chairmen to develop new ideas to better serve members of the association.

Chairmen appointed were Charles Wolgemuth, Hershey, finance & audit; Jesse F. Smith, Harrisburg, farm show booth; James Fink, Harrisburg, education and reserach; Max M. Smith, Lancaster, awards; Anthony Dobrosky, Glen Rock, youth; Dean Snyder, King of Prussia, annual meeting; Peter A. Krall, Catasauqua, membership; Dr. B. R. Baumgardt, State College, planning and evaluation; W. Dale Anderson, Willow Grove, legislative; Dwight E. Younkin, State College, communications and publicity; Walter Dunlap, Jr., Lancaster, nominations and by-laws.

Pa. Farm Bankers To Meet

The 11th annual Agriculture Lending Conference of the Pennsylvania Bankers Association will be held April 2 and 3 at the Sheraton-Conestoga Village. Bankers from throughout the state who make agricultural loans are expected to attend the two-day conference which is being held in cooperation with the Cooperative Extension

Service of Penn State University.

Included in the program will be a panel discussion by four professors from the Penn State extension program who will discuss beef, swine and grains, as well as the effect of the international situation on agriculture; dairy, poultry, and land prices; taxation; and the future management

needs of farmers.

Another highlight will be a tour of two Ephrata area farms to inspect family dairy and beef operations.

Editor's Quote Book

Economy is half the battle of life - it is not so hard to earn money as to spend it wisely

Charles Spurgeon

He's just part of our team.

The Ortho salesman is a special kind of guy, who adds an extra dimension to your Ortho fertilizer dealer.

Our salesman is really an area manager, who functions as a management consultant to his dealers.

He helps your dealer train new personnel, to handle your business. He grooms an efficient service capability for you, by analyzing equipment and personnel economics. He schedules your product shipments, and determines fair allocations. He helps establish thorough records of your personal program. And he lends a hand at setting up the grower meetings you attend.

Get to know him ... he's part of a team you can rely on.

The Ortho team approach helps you produce.

From Local Ag Teachers:

FFA - What is it?
by: Robert M. Weaver
Student Teacher of
Agriculture
Penn Manor
High School

My name is Bob Weaver, a student at Penn State University. I studied for 3½ years to be an Ag teacher

Thoughts in Passing

and now am seeing what it's like while student teaching at Penn Manor High School.

For those of you who don't know, you must be in Ag in high school before you can become an FFA member. It is not a requirement to join the FFA at some schools if you are in Ag but if you do

and work hard there is much you can get from it. These gifts from the organization are leadership ability, training in raising animals and crops, experience in odd jobs and a chance to earn money.

Leadership ability is developed through responsibilities given to you as a member. There are offices to be held and committees to be on. Much work is done as an organization. Recently the Penn Manor Chapter elected new officers for 1975. These students, though only 9, 10 and 11th graders, are given the job of running the organization and planning the activities of the chapter.

Each member is required to have a project. This can be an animal, a crop or even work experience. Accurate records must be kept during the year in order to find profit or in some cases lately, loss. As for work experience the student gets to work in an ag related job and keep records on it. He keeps track of his hours and wages along with any improvements he makes around his home.

The money making part is of interest too. Each year contests are held in which the members may enter. These are county, area and even state or national. Money or awards are given out to the students best in each contest. These awards are given in appreciation of the hard work put in by the contestant.

The FFA has all this to give and maybe more. It builds character and makes a student more aware of the life outside of his or her high school. This organization is a great thing for the students. If you don't think so, just ask any member in your area.

Farm Expenditures Will Be Surveyed

"Beginning in March, a cross-section of American farmers, including many in Pennsylvania, will be asked about their expenditures for fuel, fertilizer, feed, seed, livestock, interest, taxes, cash wages and repairs," reported W. J. Fluke, statistician in Charge of the Pennsylvania Crop and Livestock Reporting Service.

Today, farmers buy considerably more fuel, fertilizer, machinery and chemicals than several years ago. In 1974 the nation's agricultural producers spent nearly \$75 billion to grow crops and livestock - that was 16 percent more than in 1973.

Several Bradford, Lebanon and Northumberland County farmers have been selected for interviews in the national survey and will be asked about their expenditures for goods and services to raise crops and livestock.

Fluke added, "Survey results are vital to farm planners, trade and producer groups, and other agricultural specialists in understanding where farmers stand in the nation's rapidly changing economic picture." He emphasized that all survey information

collected during the personal interviews will be kept confidential and only state and national summaries will be released.

LOST WAGES

Las Vegas has everything. One guy pulled into a parking space put a dime in the meter—and lost his car! That town is getting really crowded. Nobody has enough money for the trip home. And then there's the Martian who landed in Las Vegas demanding to be taken to the cleaners.

Arcadian Liquid.

Now's the time
to top-dress grass.

Unlock the profits hidden in your pastures and meadows. Top-dress grass with Arcadian Golden URAN® liquid nitrogen. Properly fertilized, grass can produce yields packed with protein and equal in feeding value to a big corn crop. For best results, fertilize several times a year. Start with an Arcadian SLF mixed liquid fertilizer. Then follow with Golden URAN top-dressing after each cutting or grazing. Use SLF mixed fertilizers for top-dressing

mixed grass and legumes and alfalfa stubble after a crop has been removed. Add weed killers such as 2,4-D and trace elements if needed, to do more jobs at one time. Arcadian liquid spreads quickly, gives uniform coverage, and is economical to use. We'll spread it for you, or you can do it yourself. Start now to make your most neglected crop your most profitable one.

Mt. Joy 4-H Teen Leader

(Continued From Page 1)

When asked how she got interested in raising animals, Marcia smiled and nodded toward the barn.

"My father raises steers so I really got into it naturally."

"Actually though, I do like sheep better as they are easier for me to handle."

During the 4-H season, Marcia puts much time into working with her animals and explained that she even

conditions her sheep by exercising them daily.

Much of Marcia's work has been with the Mt. Joy Community Club where she has been in the cooking, sewing and cake decorating divisions. She has served as president of the cake decorating club, secretary and president of the sewing group and secretary of the cooking club.

Sewing has been one of Marcia's favorite projects and the young lady has put her skills to use by making several attractive outfits

that range from informal pants suits to long evening gowns.

Marcia has participated in the local dress revues and last summer served as the emcee for the Mt. Joy sewing club's fashion review.

Her sewing must also come naturally since her mother has been a leader of the Mt. Joy sewing club for some years.

One project which has been of particular interest to Marcia has been cake decorating. The Mt. Joy cake decorating club was headed

by Mrs. Roy Sauder who taught the art to several 4-Hers for the second year this past summer.

Marcia commented that she really enjoyed the novel 4-H project and often tries her own creations at home. In fact during our visit, Marcia gave this reporter a sneak preview of a lavishly decorated cake complete with roses.

The cake decorating club of Mt. Joy has planned a booth exhibit on the subject, for the 4-H Expo to be held next week at Park City and Marcia has planned to decorate a wedding cake for the display.

As a 4-H teen leader, Marcia has attended teen conferences at Dublin Gap and at Penn State and has participated in many county 4-H functions.

Marcia is a busy young lady who also gives her time

to presiding over the church youth group at the Hempfield Church of the Brethren. She is also a member of the Medical Careers Club at her high school and has interest in being a registered nurse.

"I want to be a nurse and would like to specialize in pediatrics," she explained. "I enjoy working with children."

Although her future plans are not definite yet, Marcia still plans to continue her 4-H work.

"I've learned so much through 4-H and have met so many people," she stated.

"4-H projects take a lot of work but the activities are worth all the effort."

It won't be long until Marcia's 4-H work will begin all over again for with spring will come steers to feed and groom, sewing creations to be made and more cakes to be decorated.

Barn spraying our business, not a sideline.

This hydraulic-
reset plow has
exclusive double-
pivot standards that
rise as high as
26 inches

Any bottom on a 2500 Power-Reset Plow can clear any rock that passes under the tractor drawbar. Exclusive double-pivot design lets the bottom move back and up past a vertical position—up to 26 inches above the furrow floor as shown here.

Hydraulic power provides the action—and controlled hydraulic return helps the bottom re-enter the ground at nearly the same angle as original entry. An exclusive valve lets you adjust down-pressure to match your field conditions and plowing speed.

Choose these 18-inch plows in 4- to 8-furrow sizes. Drop by soon and learn more about light-draft 2500 Power-Reset Plows.

Winners Named In Pork Carcass Contest

Results of the Eastern Pa. Pork Producers annual spring carcass contest were announced recently by the organization.

Ten exhibitors from Berks, Bucks, Lehigh, Montgomery

and Northampton counties entered 48 hogs in the contest which took place at the Hatfield Packing Company.

Dr. John Zeigler, Head of the Meats Lab and Robert Kimbell, director of the Meat

Animal Evaluation Center at Penn State were judges for the event.

Herb Schick Kutztown R2, exhibited both the grand champion and reserve champion animals during the event. Schick's champion was a crossbred barrow which weighed in at 220 pounds and scored with .9 inches of backfat, 31.1 inches in length and recorded at 6.11 inch square loin with 33.7 percent of hamloin percentage.

The reserve champion animal was also a cross bred barrow which weighed in at 195 pounds.

Other exhibitors entered in the contest included: Grant Lazarus, Germansville; John Turn, Kempton; Paul Bitner, Germansville; Otto

Schick, Kutztown; Calvin Lazarus, Germansville, Dennis Cooper, Lenhartsville and Carl Cooper, Lenhartsville.

Lancaster Contest

Pork producers in Lancaster County also held their carcass contest at the same time with the Grand champion animal being shown by Marc Nestleroth, Manheim.

Nestleroth's animal, which was a crossbred gilt, weighed in at 202 pounds and recorded .9 inches of backfat, 29.3 inches in length and scored 4.77 inches of loin with 34.9 percent of ham-loin percentage.

John Strawbridge's gilt placed second in the competition. Eighteen exhibitors from Lancaster County participated in the event.

- For Those Who Care Enough to Want the Very Best -

FFA's Sponsor Donkey Basketball

America's craziest and most unpredictable sport - Donkey Basketball - will be featured at Garden Spot High School Gym, at 7:30 p.m., on Monday evening, March 10. The teams will be made up of Grassland FFA members opposing the faculty of Garden Spot High School.

Diamond K Donkey Ball Co. bring their combination of circus atmosphere and rodeo thrills to town for the benefit of the Grassland

FFA.

The old saying, "stubborn as a mule," will be exemplified when the local riders match wits with the donkeys. The odds are that in most cases the donkeys will win. The old rodeo days will be brought to mind when the local Gene Autrys and Roy Rogers take their spills and bounces.

Donkey ball is not a laugh-a-minute sport, but rather a laugh-a-second sport. You won't want to miss this fun-

filled evening. Get your advance tickets early and see the "FUNNIEST SHOW ON EARTH." You'll be glad that you did.

Advance tickets are available from any Grassland FFA member or at the door at 6:30 on Monday evening.

There will be plenty of laughs for the entire family during this fun-filled evening. You haven't witnessed basketball until you have seen it played on donkeys.

ASSIST NATURE WITH AGRISERUM

Increases protein, minerals, trace elements in crops - stock eats less total feed.

Improves soil tremendously from year to year. Gives bigger roots.

Multiplies earthworms and soil bacteria fast, which loosens soil like a sponge for easy plowing, finer texture and holding water.

Agriserum's larger roots reach down for that water stored there. Terrific proof in drought areas. Prepare ahead!

You save fuel, feed, protein bills, sprays, conserve moisture plus sometimes a much bigger yield even when there is no drought. One side by side test - 18 inches taller Rye locally last May.

All these benefits for very little cost because that all powerful nature works for you as originally designed.

The value of only 1 percent more protein in corn (many have more) would bring back about \$9 or \$10 for every dollar spent for Agriserum, besides all the other wonderful benefits.

You wonder why most people don't take advantage of salvation.

I also wonder why most people don't take advantage of nature.

The need for fertilizer is reduced. Longer time users get huge crops without. To get second year results next year, you must start this year. Testimonial literature almost unbelievable. Eli L. Stoltzfus, 69 Strasburg Pike, Lancaster, PA 17602.

Apply your herbicide at the ideal time in corn:

Lasso Plus atrazine.

Apply Lasso plus atrazine tank mix as you plant, or after planting, before corn or weeds come up with or without liquid fertilizers.

Either way, you can plant as soon as your seedbed is ready - and still get the early grass and broadleaf control you need.

What's more, your herbicide goes on when the seedbed is in ideal condition for herbicide application.

Del. Researcher Seeks Drought Resistant Corn

Lancaster Farming, Saturday, March 8, 1975—17

Corn is one of Delaware's biggest agricultural crops. Some 194,000 acres of corn were grown in the state last year, much of this in Sussex county. Yields from that size planting should have been around 15,520,000 bushels (figuring an average of 80 bushels an acre). As everyone knows, though, that's not what Delaware farmers got last year. Even with a bumper crop in New Castle county to offset the disaster downstate,

Delaware's 1974 corn yield was only 12,416,000 bushels—some three million less than it should have been.

The drastic effects of last summer's drought underline what growers and agronomists have known all along—the major problem in corn production on the Delmarva peninsula isn't disease or insects, but moisture stress at critical periods during the growing season.

People are looking at a number of solutions to the problem. Some are suggesting weather modification as an answer. Others look to irrigation as the cure. Many feel this would be the best and safest way to meet the need for water, but only a few growers have irrigation now, and for one reason or another a large percent of corn farmers aren't likely to get irrigation systems for themselves in the near future.

This leaves two other solutions—the modification of cultivation techniques and the development of corn hybrids that are drought-tolerant.

University of Delaware plant geneticist, Dr. Sue Sullivan, wants to see what can be done to modify existing corn hybrids to make them more tolerant of the frequent drought conditions of lower Delaware. "Most of our hybrids are a result of research and development in mid-western

corn states," she explains. "A whole different world exists there. Soil types and fertility are different, climate varies in regard to humidity—which gives different disease problems—and there are different patterns of moisture stress and different effects of stress due to the water-holding capacity of soils in the two regions."

Dr. Sullivan sees a need to develop new hybrid combinations which will perform better on the light, sandy soils of the Delmarva peninsula. She plans to begin work in this direction this summer at the University of Delaware's Agricultural Experiment Station farm in Georgetown. The first thing she will be looking for are the factors in corn plants that contribute to drought tolerance.

These factors include fast-developing, deep-growing root systems better able to extract moisture from the soil and the ability of some plants to use water more efficiently—possibly by closing leaf pores (stomata) in stress conditions so that they lose less water into the air. Some hybrids have multiple-ear tendencies, others will produce larger ears at lower plant populations—other important factors. Since the corn plant's need for water is greatest around silking time, the geneticist will also be looking for plants which silk well under moisture stress. There may also be higher-

yielding early-season hybrids which miss or "avoid" moisture stresses altogether.

Promising corn hybrids that Dr. Sullivan identifies will be used in no-till tests being conducted by fellow plant scientists at the Experiment Station, as well as in conventional tillage studies. What the researchers as a group hope to come up with, says Dr. Sullivan, is a package of drought-tolerant hybrids and crop management techniques which will result in higher, more consistent yields for Delaware corn growers.

HOUSE PLANTS

Plants can be light-starved during the short-day winter months. Help your plants make the best use of light they get by keeping the leaves clean

DIETERS CHOICE
Turkey and chicken are often recommended for persons who are watching their weight. Both are excellent sources of high quality protein and many other essential nutrients including iron, thiamine, riboflavin and niacin.

The **STARCRAFT**

PIG and SOW CASTLE

...a factory-built
nursery environment
that lets you cut
pig raising costs

Now, at far less than you'd pay for an ordinary structure, you can give your pigs the royal treatment they survive and thrive on. The new STARCRAFT Pig Castle gets your pigs indoors under controlled conditions where you can save more of them — and also save feed and labor by getting them to market faster.

The STARCRAFT Pig Castle can easily pay for itself in saved pigs, saved labor and saved feed.

And what you get in the bargain is a big boost in your morale. Because while you're improving your pigs' living environment, you're also improving your own working environment.

Your STARCRAFT Pig Castle nursery building will be delivered to you ready to use. When it's delivered by flat-bed truck it's placed in any convenient location you choose. All you do is provide a crushed rock base, or preferably a 4-inch

concrete slab — then hook it up to water and electricity and turn in the pigs.

It comes complete with slotted floors, manure pit, ventilation system (that pulls air over the tops of animals, down thru the pit, and out, for virtually odor-free conditions), choice of LP Gas or electric heater, feeders, waterers, washable interior walls of Fiberglas® real redwood exterior walls, full insulation, and lots of other features.

Here's the pig raising system that can make the job almost a pleasure! For complete and speedy details, use the coupon. No obligation, of course.

...you'd feed Purina
Purina research tests showed
balanced amino acids save
67 pounds of feed from
start to finish*

The beads in the feeder trough represent the amino acids that are so essential to a hog. You can't see the amino acids in a ration, but if you could, it would be very apparent how much variance there is in the amino acid balance between different brands of feed.

*Purina Research experiment #210 compared a ration with an adequate amino acid balance to rations containing 90%, 80% and 70% of the Purina Amino Acid Standards. The results showed it took 67.2 pounds less feed to finish a hog from 30 pounds to market on the ration adequately balanced with amino acids.

Don't wait to make the change to Purina Hog Chow®. Its amino acid balanced for maximum performance.

Chester County DHIA MONTHLY REPORT

A cow in the herd of Jefferson D. Yoder of Chester County corded the highest production for the month of January. Number 7 produced 1036 pounds of butterfat with 25,116 pounds of milk. Second high was Beauty in the herd of Paul King. She produced 976 pounds of butter fat with 21,823 pounds of milk. Jefferson Yoder's herd of registered Holsteins recorded the highest daily production per cow with 2.53 pounds of fat.

DE LAVAL MODEL 200 AUTOMATIC

The Automatic Model 200 Milker, a major development in the dairy industry, is the first milker that is controlled by the cow. When the cow is ready, the machine begins to milk and an indicator light goes on to tell the operator that it is milking. The Model 200 automatically stops milking when the cow is through. The indicator light will then go out telling the operator that the cow is milked out.

Corn-soy: the ideal source of amino acids

Feed the Vigortone corn-soy way. For some time now, universities and top nutritionists have agreed that a corn-soy ration provides the ideal level and balance of amino acids for growing and finishing swine. In fact, one leading nutritionist recently concluded: "There is no single ingredient or group of ingredients that will economically substitute for soybean meal in swine rations."

Corn-soy rations, like all swine rations, must be fortified with the proper levels of major minerals, trace minerals, vitamins and other ingredients vital to the health and growth of the pig. This is where Vigortone pre-mixes come in.

Vigortone pre-mixes for proper nutrition

Seldom will any feed program out-

perform a Vigortone fortified corn-soy ration. The reasons are simple. In addition to providing the proper balance of all 10 essential amino acids, you also assure adequate levels of other nutrients — even when poor quality grain is fed.

Unlike commercial programs, the ration is not robbed of proper nutrition when you cut back on protein (amino acids), because your major minerals, trace minerals, vitamins and other ingredients are separate.

Visit with your Vigortone Serviceman

If you'd like to learn more about corn-soy rations and how to fortify them, talk to your Vigortone serviceman soon. You'll learn why more pork producers are feeding Vigortone — especially now.

Lancaster Co. Conservation Agreements

The Lancaster County Conservation District board of directors accepted 10 new conservation cooperators at their recent monthly meeting. They also accepted three cancellations of old agreements.

The new cooperators, their townships and acreage are: Roman Beiler, Paradise Township, 126 acres; Mark Yoder, Caernarvon, 40; Amos L. Beiler, Eden, 64;

Weaver M. Hurst, Salisbury, 48; Runnymede Farms, John Hackman, mgr., Rapho, 173; Weaver Burkholder, West Earl, 55; David Spangler, Little Britain, 130; Kenneth Scholz, Manor, 10; Leon Hess, Earl, 70; Benjamin Glick, Bart, 60.

Cancellations were received from: Charles Bridges, East Cocalico, 15 acres, and Robert G. Brubaker, Mount Joy, 260.

WEIGH THE FACTS

Many people distinguish between overweight and obesity. An individual whose weight is 10-20 percent above the ideal according to weight tables—is considered overweight.

MILK STORAGE

Keep nonfat dry milk powder at 75 degrees or lower, if possible until reconstituted. Close the package immediately after using. If milk powder is exposed to moisture in the air during storage, it may become lumpy and stale.

DAIRY EQUIPMENT COMPANY OFFERS CASH REBATE PROGRAM ON ALL NEW BULK TANKS

Sold and Recorded Before Midnight APRIL 30, 1975.

BOU-MATIC COOLER/CASH REBATE CHART

SIZE	REBATE
450 - 600 gallons.....	\$ 50.00
800 - 1000 gallons.....	75.00
1250, 1500, 2000 gallons.....	100.00

USED BULK MILK TANKS

For Diesel or Electric Installation.

- (2) 400 gal. Sunset tanks \$800.00 each
- (1) D-2 400 gal. Girton \$1200.00
- (1) 300 gal. Esco
- (1) 350 gal. Esco
- (1) 400 Jamesway
- (1) used Sputnik
- (3) used Alamo 30 Surge vacuum pumps
- (2) used 5 H.P. Copeland Compressors

CHORE-TIME

NEW CAGE FEEDING SYSTEM

Feed is your biggest out-of-pocket cost. Cut it just 1 percent - without cutting production - and that's money in your pocket.

Our new cage feeder helps you do just that. Because it uses a new feeding principle poultrymen have proved will work.

It's our experience birds prefer feed that hasn't been picked over. They eat more, convert feed better and are more productive. So we designed our new cage feeding system to deliver fresh, fine-ground feed+ or crumbles to every bird in a closed tube.

CHORE-TIME

Made to work. Built to last.

WE SELL, SERVICE and INSTALL

Questions and Answers on Health Foods

What's the story on health foods? As their popularity has increased, so have the questions about them.

What exactly are health foods and where do they come from? Do they cost more than the standard fare and are they actually better for you? Are there legal checks on health food claims?

It's tough to come up with solid answers. The rise of health foods was so sudden that research on the subject lags behind public interest.

There is either scant information or outright disagreement on health foods' definition, cost, and quality, and on regulation by the Government.

Health foods have been on the market for decades, but at this time it is still hard to find a working definition for the term "health food," or a good estimate of the size of the market.

"Everybody eats food for their health," says one food specialist with the USDA's Economic Research Service. "You wouldn't intentionally eat anything that isn't healthy, would you?"

He would prefer less general terms, like "natural" or "organic," but even then you run into definition problems.

Within the health food industry, "natural" pertains to foods that have no additives. "Organic" is more precise—it refers to foods

that not only have no additives, but are also grown without chemical fertilizers or pesticides.

Congress and the Food and Drug Administration (FDA) have tried for years to draft legislation to set standards for the labeling of organic foods, but they've been slowed by controversy over what the term really means.

Some food industry people fear that a federally approved "organic" label on a food item might imply superiority, which, they stress, is not necessarily the case.

For better or worse, there is no question that health food sales have soared in the past decade. USDA observers estimate that the market has jumped about 100 percent in 10 years.

But the health food market is still too small, they say, to warrant extensive study. How small? Again, definition is an added problem. If health food sales include those by the many new vitamin stores, the industry claims about 5 percent of the total food market. Disregarding vitamins, guesses drop to 1 to 3 percent.

Some USDA observers think that the health food surge is leveling off. They cite the rising cost of foods in general, saying that consumers can't afford the higher price of health foods. A spokesman for the

Rodale Press in Pennsylvania, a leader in the health food industry, disagrees. He asserts that the popularity of health foods will continue to mount. He says that farmers are finding less expensive ways to grow organically, so organic food prices will not rise as rapidly as regular foods.

He estimates that there are between 3,000 to 3,500 health food stores in the U.S., but that the vast majority specialize in vitamins "with some food on the side." But he adds that the number of stores selling only natural and organic foods is on the upswing.

For the most part, these stores get their products from small farmers who raise all their food organically—or claim to. Some big farmers do some organic farming on the side. The man from Rodale

estimates that including the part-timers there are about 10,000 organic farmers.

Organic farmers use only natural, rather than chemical, fertilizers. They believe this yields healthier, tastier crops. The farmers say they are finding natural pesticides that are less dangerous, more effective, and less costly than synthetic ones.

As an alternative to DDT and other chemical pesticides, organic farmers recommend the use of beneficial insects to prey on harmful ones, insect traps, interplanting, and insect diseases.

For example, sprinkling the powder of the "milky spore disease" in the ground near crops is said to be a safe and effective way of combating Japanese beetles.

Introduction of certain pest-eating insects is

regarded as considerably effective. Ladybugs, for example, are voracious eaters of aphids. And the praying mantis will gobble down just about any harmful insect.

Some organic farmers use insect traps that are as simple as a hanging cup of molasses and glue, or as sophisticated as electric lights that attract and electrocute night-flyers.

Though natural pesticides may cost less than chemical types, natural fertilizer is generally more expensive than the chemicals. This, and the higher production costs of a farmer dealing in small quantities, drives up the cost of organic foods.

A special science advisor to the Secretary of USDA reported last April that health food prices were ranging from one-third to 2 times higher than regular

supermarket foods. She has doubts about the relative value of organic foods. "Crops produced with the help of chemical fertilizers are equal nutritionally to crops produced by the 'organic' means," she believes.

She reasons that it makes no difference whether a fertilizer is organic or chemical since all elements essential to plant growth enter in the inorganic form. She says of organically grown foods: "There is nothing intrinsically safe about nature."

She cautions that "safe use of pesticides is a must." According to her, the risk from bacterial contamination of foods is worse than the risk of consuming pesticide residues or food additives.

Determining whether food

Questions and Answers

[Continued from Page 22]
labeled "organically grown" is what it claims to be can be difficult. The taste and color of produce, the advisor says,

is a question of freshness and maturity, not gardening method.

A layman cannot tell by looking at an "organically grown" tomato whether that

claim is true. So he may turn to the Government for help. But unless he's in Oregon at the time, the help just won't be there.

Why Oregon? In the absence of Federal guidelines on organic food labeling, it's up to the States to act, and thus far, Oregon is the only one that has.

Oregon's law, effective since last October, protects the consumer with stipulations that food labeled "organically grown" must have been raised "without synthetic pesticides, fertilizers, or chemicals; in soil in which the humus content is increased only by the addition of natural matter and in which the mineral content is increased only by the application of natural mineral fertilizers or other natural matter."

The Oregon law also controls labeling of "organically processed food," which means no

synthetic additives. On meat and poultry products, a label "produced in an organic environment" implies that there was no unnecessary use of pesticides on the animals or their feed, and no exposure to antibiotics, growth stimulants, or any drug that wasn't absolutely necessary. No drug can be administered within 30 days of slaughter.

Other States that are considering similar legislation include California, Maryland, New York, and Pennsylvania.

Organic food farming has been criticized as being inefficient, and that criticism becomes particularly serious now that the world is faced with food shortages.

But organic growers are arguing that their system done on a larger scale would be cheaper, more efficient, and provide better food. One study completed at Penn-

Lancaster Farming, Saturday, March 8, 1975—23

sylvania State University last year concluded that it was 40 percent cheaper to pesticide an apple orchard naturally than with chemicals—and the cost of chemical pesticides is soaring now.

The future of health foods in America is thus difficult to forecast. It hinges on several variables.

If more States adopt labeling codes, public uncertainty about health foods might dissipate—which could lead to increased sales. And if real incomes start rising sharply again, consumers may opt for health foods

regardless of their price.

If organic farmers become more efficient, the price gap between health and regular foods could narrow—and this would certainly enhance the market. Also, if the Nation's food processors were to relax their concern about safety standards, that would open the door to merchandisers of health foods.

But if these factors fail to fall into place, criticisms like those of inefficiency, high costs, and questionable nutritional value could combine to keep the industry small.

Lebanon-Dauphin Corn Growers Conduct Clinic

by Newton Bair,
Associate Lebanon County
Agent

Thursday's bright sun and mild breezes provided just the right atmosphere for corn growers from the Dauphin-Lebanon area to discuss their production strategy for the coming season. The two-county meeting, held in Halifax, was sponsored by the Cooperative Extension Service. John Harris, Associate Dauphin County Agent, served as host and chairman.

Information on the latest research and field trials was reported by Dr. Joseph McGahen, corn specialist with the Cooperative Extension Service of Penn State University. Dr. Willis McClellan, Penn State agronomist, brought the corn growers up to date on chemical weed control and Dr. Robert Tetrault, extension entomologist, talked

about the most serious corn insects and how to subdue them. Six master corn growers were honored by County Agents John Harris, Dauphin County and Newton Bair, Lebanon County, who supervised the yield checks in their respective counties.

Noting that the average cost of producing corn was in excess of \$200 per acre last year, McGahen expressed his concern that corn producers use every trick possible this year to reduce their costs and maximize yields of grain. He urged the use of planter box seed treatment, even though the purchased seed was previously treated. Soil insecticides applied at planting time have been shown to increase yields as much as 15 percent. "Many corn growers overlook the minor details that often add up to major yield reductions," McGahen said.

McGahen listed some of

the more important of these oft-neglected items: match planter plates to seed size - sizes vary between commercial varieties and from year to year. Planting depth and seed coverage should be checked frequently, as field conditions vary and planters change adjustment. Corn fields should not be worked too finely, which often increases the chance of crusting following a rain. He also recommends applying no more than a total of 45 pounds of nitrogen plus potassium as a starter fertilizer to avoid seed injury. Two hundred eighty pounds of 5-10-10 would provide 14 pounds of nitrogen and 28 pounds of potassium, nearly the maximum allowable for planter application.

Dr. McClellan stressed the importance of identifying the major weed problem in each field and then selecting the best herbicide to properly

John Harris (third from left), Associate Dauphin County Agent, presents Master Corn Growers

Awards to Thomas Williams, Middletown; Donald Miller, Millersburg and David Coble, Hershey.

From left, John H. Herr, Lebanon R4, Richard Elliott, Lebanon R4, and Galen Boyd, Lebanon R1, receive Master Corn Growers Awards from Associate Lebanon County Agent

Newton Bair. Each grower produced official yields in excess of 150 bushels shelled corn per acre. Average yield in the state contest was 126 bushels per acre.

Urner-Barry Quotations

(Continued From Page 1)

as a tool in egg pricing. He said it didn't reflect the retail carton price, the wholesale price or the producer price, and that at present, the Urner-Barry quotation most nearly matched the warehouse delivery price for cartoned eggs. The actual price to producers, Carter noted, is determined by competitive factors in the marketplace.

Another eggman in his question implied that the Urner-Barry price was artificially lowered several weeks before holidays, so that buyers could pay less for eggs which would be stored for holiday sale. "Why should we producers

have to foot the storage bill for the packers?" the man asked. "Why don't you hold the price up before holidays?"

Carter again said that the price to producers depends on the competition for eggs. "And when inventories build up, as they do before a holiday, the price goes down. It's the law of supply and demand," he said.

Frank Urner, who's presently chiefly responsible for the Urner-Barry price quotations, joined Carter before the audience. Urner plans to retire in the summer, and Carter, who is president of the 125-year-old publishing firm, will take

over the egg pricing responsibility.

"I want to say that Urner-Barry has no connection at all with any producer, packer, buyer or seller of eggs. Except for our publications, we have never had any financial connection with any part of the egg industry, and we never will. We do not benefit from our egg price," Urner said.

"We deplore the deterioration in the producer price as much as you do, but there's nothing we can do about it. No matter what base price you use, competition will always determine a market price." Urner had previously

displayed a graph which showed how market prices have changed in the past 20 years with respect to the Urner-Barry quotes. In the early 50's, the base price was fairly close to the price paid to egg producers. But since then, all prices - producer, wholesale and retail - have declined with respect to the Urner-Barry price.

Urner said they had discussed methods of arriving at a base quote which would always reflect some one segment of the egg market, but that they had never figured out how to do it. As soon as any price is set, Urner noted, producers, packers and chain store buyers begin to bargain up and down from that point.

Carter pointed out that while egg producers may not

Lancaster Farming, Saturday, March 8, 1975—25

like the price they get at times, they are still receiving a higher percentage of the retail price than do other producers of food commodities.

Carter and Urner were followed by Lou Moore, Penn State's extension economist, who talked about the outlook for the U.S. economy and feed grain prices in the months ahead. An interesting point Moore made for anyone fearing a 1930's style depression was that Americans who aren't working now control a full quarter of the country's purchasing power. "Government programs like unemployment insurance and food stamps mean these people are going to have real purchasing power even though they're not working. And with that much money out there, there's just no way that we're going to fall into a nightmare depression."

Inflation and recession were still problems that would plague the economy, Moore said, adding that whatever the government did to cure the recession would just add more fuel to the fires of inflation. He said some forecasters are now predicting recession and an unsettled economy well into 1976.

Moore struck a happier note, for livestock producers but not necessarily for grain farmers, when he said that the 1975 supply of feed grains should be more than adequate, given favorable weather conditions.

Donald Daum, a Penn State ag engineer, talked to the group about OSHA regulations. He said that anyone who employs any labor at all, other than family members, would fall under the provisions of the

1970 Occupational Safety and Health Act. OSHA inspectors, Daum said, hadn't visited too many farms, and they probably wouldn't be getting on very many farms. The number of inspectors is limited, and agriculture is not one of their top priorities.

One regulation Daum urged the farmers to follow was to post a copy of an OSHA explanatory poster in a prominent place so that all their employees could read it. "If an OSHA man comes on your farm, and if you hire any labor, you'll be subjected to an automatic \$50 fine if that piece of paper isn't displayed," Daum said. "So maybe by coming here tonight you've learned something that will save you \$50."

Another requirement for employers of more than seven employees is a record of all employee accidents and illnesses. If these records aren't kept, Daum said, the employer would again be liable for an automatic \$50 fine.

Daum commented that an agricultural employer would likely never have to report anything to OSHA unless there was a major accident on his farm involving the death of a worker or the hospitalization of five or more workers. Another occasion might be if a particular farm were selected for one of OSHA's periodic sample surveys.

Daum also discussed the new pesticide law which will go into effect in Pennsylvania in October, 1976. He said the Keystone State's law met minimum requirements set forth by the U.S. Environmental Protection Agency, and that it would be administered by the Pennsylvania Department of Agriculture.

AGWAY

YOUR PROFIT SAFEGUARD

Protect the quality and fresh flavor of your milk with modern cooling systems engineered, installed and serviced by Agway.

SUNSET BULK COOLER

The stainless steel evaporator welded directly to the inner liner puts maximum refrigerant flow in direct contact with milk cooling surface for fast cooling action and efficient compressor use. The Sunset is a chore saver too. Simply attach the automatic tank washer to the built-in clean-in-place spray ball and everything from pre-rinse to final sanitizing is handled with the flick of a switch. These enclosed atmospheric models come in capacities from 300 to 3000 gallons. All are constructed of nickel-bearing stainless steel for a lifetime of heavy use.

FELDMEIER MULTI-TUBE PRE-COOLER

Chills milk to 34°F before it hits the bulk tank. So you never chance the rancidity that can develop as warm milk is dumped into a cold tank. And you eliminate the need for continuous agitation, a contributing factor to rancidity and bacteria buildup. You'll save on electricity too. Agway can engineer a Feldmeier installation to fit any milk-house setup using well water or even pond water for partial cooling. And for even more efficiency there's a Feldmeier Ice Builder or Chiller to fit your system.

For complete information and estimates on Sunset and Feldmeier installations engineered to fit your milkhouse, call Agway and ask for the Farm Systems Engineer to stop by.

INCREASE YIELDS \$15.00 AN ACRE FOR 25¢

ORTHO ISOTOX® Seed Treater (F) is backed by the best kind of proof a corn seed-treater could have: over one hundred million successful corn acres. All kinds of climate. All types of soil. All sorts of men doing the planting. Yield increases run up to fifteen dollars an acre — from a product that costs about 25 cents to treat a 20,000 plant-population-acre.

Dairy Health

(Continued From Page 1)

find a problem, the farmer can comply with the law without spending a lot of money. Compliance is most often a matter of cleaning up rather than spending money."

Another Dairy Day speaker was Dr. Samuel Guss, Penn State's extension veterinarian. He talked about new developments in mastitis control, and told the dairymen that the best answer to mastitis control was better milk practices. Proper milking, he said, prevents injury to teat ends. "Dairymen neglect the care of the teat ends, and that's the most important part of a cow," he said.

More progress against mastitis would be made, Guss told the group, if farmers could avoid stress and injury to their cows. He said proper nutrition and cleanliness were important, too. "Another thing we should be doing is checking the bulk tank once a month with the California Mastitis Test. If you check the bulk tank, not the individual cows, you'll know when you've got a problem with the herd, and you'll know when it's time to start treatment."

Guss stressed preventive medicine, rather than curative measures. But for infected cows, he recommended a measure which appeared in "The Practical Stock Doctor", a book printed in 1850. The book instructed 19th century dairymen to wash their udders of their infected cows and strip the milk from them every two hours. Guss

pointed out that two recent studies, one in Russia and one in this country, have shown this method to be just as effective as antibiotics.

Medicines can be a help in overcoming mastitis, Guss warned, but if improper milking methods are continued, medicines could well lead to even more severe cases. "If you get the staph and strep organisms out of a sick cow's udder, she's going to get a worse infection if you don't stop teat end injury. Some organisms, like E. Coli, are always present in a dairy barn, and if they get into an udder, you've got real problems. E. coli can't live in the same udder as staph and strep, so if you get rid of those, you'd better be sure you've got a healthy cow."

Following Guss, a panel of bankers told the audience about the credit picture for dairymen. Stanley Musselman, vice-president of National Central Bank, noted that the county's dairy herd has grown from 41,000 cows in 1930 to 53,000 in 1950 to about 71,000 today. He said growth has slowed down somewhat, but that it would continue to be an important part of local agriculture.

George Lewis, from Farmers First National Bank, discussed the importance of good records, budgeting and planning. "When you go to your banker," Lewis said, "he wants to know how you're going to use the proceeds of a loan and also how you're going to pay him back. And you can't tell him that unless you have a detailed plan."

Roy Geisman, head of the local Farmers Home Administration, discussed his agency's role in farm financing, noting that they usually cooperated with other lenders in meeting farmers' needs. One new program he mentioned allows the FHA to give out second mortgages of up to \$100,000 at five percent interest for up to 40 years to farmers who have access to \$125,000 in first mortgage money.

The importance of net worth was covered by Carl Brown, manager of the Lancaster Production Credit and Federal Land Bank office. He said a farmer's borrowing capacity depended very much on his net worth, although he added that a good track record was vital, too.

A very unfamiliar voice followed the bankers, and it, too, talked about farm finances. The voice originated in Minnesota, and it belonged to a computer that spoke more or less plain English. Dr. Lennie Kizer, an assistant professor of agricultural economics at Penn State, treated the assembled dairymen to a voice they might be hearing more of in the coming years when he completed a telephone linkup with the mathematical marvel half a continent away. The computer told the dairymen that if they were paying average feed and labor costs in Lancaster County, milking 42 pounds of milk per cow per day, and getting \$8.50 a

hundred for their milk, they were losing \$20 a month on each cow.

How much milk must a cow produce to just break even? Pushing buttons on a console hooked up to the telephone, Kaiser asked the computer that question. The answer was 50 pounds a day.

There's a possibility that this computer service will be available to area farmers, Associate County Agent Jay Irwin announced. He said if enough farmers are interested, the extension service would make a console available with a phone linkup to the computer. The cost of the service would be about \$10 to \$12 each time it's used. Irwin invited any interested dairymen to contact the

Lancaster Farming, Saturday, March 8, 1975—27

extension office for more details.

Also speaking was Marlowe W. Hartung, president of a local advertising agency, who talked about the effectiveness of product advertising. He also

presented some novel ideas for milk marketing, including a bulk tank in the consumer's home which would accept deliveries much the way oil is delivered now. Only, presumably in smaller quantities.

Vernon Leininger, left, president of the Pennsylvania Poultry Federation President, accepts a report from (left to right) Ken Longacre, Dale M. Weaver, and John Hoffman that ticket sales for the Federation's Annual Fund Raising Banquet have already passed last year's sales.

Longacre and Weaver are serving as co-chairmen for the affair while Hoffman is the Federation's executive director. The banquet is scheduled for March 19, 1975, at the Host Inn in Harrisburg, Pennsylvania, beginning at 6:30 p.m.

Tax Meeting Scheduled by Garden Spot Adult Farmers

The Adult Farmer Program at the Hinkletown Alternative School will sponsor a program on Wednesday, March 12, on federal income tax. Speaker for the evening will be Harry Constein, a Lancaster County native who has been a field agent with the Internal Revenue Service since 1966. Constein, a certified public accountant, will discuss income tax deductions and the records necessary to substantiate them.

The meeting will be held at the Hinkletown Alternative School approximately one-half mile north of Route 322 just east of Hinkletown. The meeting will start at 7:30 p.m. and, all interested persons are invited to attend, according to Robert Anderson, adult farmer advisor.

The clear stream law meeting previously scheduled for March 5 will be held on March 26. Speakers for the evening will be Afton Schadel, State Conservation Commission; Henry Hackman and other representative of the Soil Conservation Service.

Big capacity in a Bear Claw spreader

570/580 MANURE SPREADERS

The new "Better Bear Claw" single beater design from International® is now available in a big capacity spreader for large dairy or feeding operations. Both the 570, with 271 cu ft heaped capacity, and the 580, with a whopping 312 cu ft heaped capacity, ride on tandem wheels with a bogie axle arrangement that lightens the load on the front axle to reduce rutting and improve cornering ability.

- Straight-through underframe design for direct pull from hitch to wheels
- Improved Bear Claw beater design gives wider, more even spreading
- Dual aprons with four chains move even the heaviest loads
- Also available in truck mounted models

If you've got big manure problems, we've got the spreader to handle them.

IN STOCK

NEW (1) Model 570 Spreader W-Upper Beater - \$2875.00

WOW! THAT IS BOUMATIC

Yes, It Is True!

84% of all cows in the state of California are milked with Bou-Matic Milkers.

MR. DAIRYMAN:

The dairy farmer in California, due to his breeding and management and his feeding program, has come up with a very high productive herd over the last 8 years

These rolling herd averages are 54 pounds and up which is nothing uncommon, they were forced to look into better milking systems that would do the job with a minimum of udder irritations such as

- 1—Low Vacuum of 10½" to 11½"
- 2—Not flooding at the teat end
- 3—No back flushing of the teat canal
- 4—Proper pulsations per minute
- 5—Milking all four quarters out together
- 6—Alternating twin-pulsation for front & rear quarters

7—Inflations which prevent the lines from bulging and climbing
8—Visi-claw for visible milking - plus many more features

Whether you are milking 15 cows or 1500 it will pay you to investigate what Bou-Matic can do for you and your herd. A Dari-Kool Bou-Matic Milking System along with good herd management has proved a winning combination for thousands of dairymen. Ask any Dari-Kool Bou-Matic user.

CHECKLIST for buying a gutter cleaner

If you're now looking for a gutter cleaner, be sure it has all these important features:

- ☐ One piece chain link with hook and eye for heavy duty 4 way flexibility
- ☐ Angled flites for added efficiency
- ☐ Wear shoe on each flite a full half inch thick for longer flite life
- ☐ Flites welded to links — fewer parts to corrode
- ☐ Easy link removal in 10 seconds — without tools
- ☐ Removable corner wheel assembles to eliminate cement break out
- ☐ Flanged corner wheel to guide chain and protect gutter floor
- ☐ 4 Tooth drive sprocket reduces strain on reducer
- ☐ Sprocket and roller chain reducer for complete dependability
- ☐ Flite cleaner engineered to serve right and last long
- ☐ Automatic chain tightener works with full or part load
- ☐ Continuous duty motor eliminates motor overheating
- ☐ Telescoping slide legs for easy slide adjustment
- ☐ Chilled cast hold down shoe for longer shoe life
- ☐ Chain oiler for lubrication and corrosion resistance

The only gutter cleaner which gives you ALL these vital features and more is the PATZ Gutter Cleaner. Designed by a farmer for farmers this unit will provide years of labor saving trouble free service.

A tour of 4-H'ers from the Philippines visited the packing tables at Pennfield's Cloisterdale egg plant near Ephrata on Tuesday. The youths were on a farm operation tour which is part of a two-year program of leadership training and work experience.

4-H'ers

[Continued From Page 1]

Pederson pointed out that this was the first Philippine group to come to the U.S., and that another group was getting ready to come over in the spring. The Filipinos will be placed with host families in a four-state area which includes Pennsylvania, New Jersey, Delaware and Maryland. All the trainees are carefully selected, between 18 and 30 years of age, at least high school graduates, and all have

definite plans for pursuing careers in agriculture.

While they were in Lancaster County, the young farmers toured Pennfield Corp.'s Cloisterdale egg operation near Ephrata, the Pennfield feed plant, the Triple-G dairy farm in Denver, Victor Weaver's and Sperry New Holland in New Holland, Hershey Chocolate and the Pennsylvania Farm Museum.

All the trainees are getting on-the-job training in either vegetable, swine or poultry production. In addition to the National 4-H Foundation, the program is conducted under

the auspices of the U.S. Department of Labor, state employment services, cooperative extension, and the U.S. Departments of State and Agriculture.

While they're on their host farms, Pederson said, the trainees are paid a prevailing wage which is established for the program by the Labor Department. Trainees presently start at \$260 per month, are raised to \$280 after three months and go to \$310 for the final 14 months of the 20-month work program. Of that amount, Pederson said \$55 goes directly to the trainee, and the rest is paid to the 4-H Foundation to defray costs of the program. He said these funds make the program completely self-supporting.

In addition to the work experience, the trainees spend several weeks in training before they depart for the U.S. For the first 20 months of their stay here, the trainees are with their host farms. Pederson noted that the Foundation looks for progressive farmers who are able to help the trainees learn about their areas of specialization.

After their work experience, the youths spend three months in a college-level course concentrating on the production areas they'll specialize in when they return home.

Pederson said that he's been very gratified with the response of Southeastern Pennsylvania farmers to the program. He added that if any farmers are interested in the program, they can contact him by writing to National 4-H Foundation, 7100 Connecticut Avenue, Washington, D.C. 20015.

FULTON, N.J.

LOCAL AGRI-KING SERVICEMAN REGRETS LOSING SATISFIED CUSTOMER

Due to moving out of state, this AGRI-KING fed herd will be dispersed on Tuesday, March 11 at 11 A.M.

HOLSTEIN HERD — 49 cows and heifers in milk. A good number fresh or close. Some due each month, 10 due July and August.

Herd owned by Robert Bates, RR1, Dillsburg, Pa. Farm located in York Co., about 7 miles south of Dillsburg, Pa., or 7 miles north of East Berlin, Pa. on Route 194, then West 1 mile on Kimmel Road.

This herd was started on the AGRI-KING feeding program in December 1973. In November 1973 their rolling herd average was 12,900 lbs. milk and 490 lbs. fat. As of February 1975 their rolling herd average was 14,440 lbs. milk and 550 lbs. fat.

Mr. Bates Says: "I feel I'm producing each 100 lbs. milk cheaper than ever before. And even with the increase in production, my problems have not increased. I'm really sold on the AGRI-KING feeding program and will continue to use it in Tennessee."

4-Hers Kick-off Season With Expo

by Sally Bair
Farm Feature Writer

The 4-H program no longer is limited just to cows and cooking, and next week 4-H Expo will take over the Watt and Shand Mall at Park City Shopping Center to show what the 3500 4-H members in Lancaster County are doing.

Exhibits, demonstrations and live animals will be used to draw attention to the 4-H program in the County and tell the general public the 4-H story.

Fifteen local clubs will vie for prize money to be awarded by Park City Associates for the exhibits they have designed.

4-H Expo at Park City will officially open Thursday morning, March 13 and conclude on Saturday, March 15.

According to Anne Hinkel, assistant extension home economist, the exhibits will represent a fair cross section of projects available to 4-H members in this county. There will be exhibits telling about the traditional animal projects and cooking and sewing, but some information on newer projects also will be featured.

Penn Willow 4-H Club will stress bicycle safety in their exhibit, featuring bicycles donated for the occasion by the J. C. Penney Company. Another exhibit will feature cake decorating. And one exhibit which will be sure to attract a lot of interest will have live animals - a kid, a lamb and a calf.

A large walk-through exhibit will explain the entire scope of the program by means of a slide presentation and visuals. According to Miss Hinkel there will also be a general information booth to be manned by 4-Hers and local leaders. At this booth, interested persons can obtain specific information and look over some of the individual project books - and can sign up to become members or leaders.

All day Saturday demonstrations will be given to spark the interest of passers-by. Included will be demonstrations on macrame, crocheting, outdoor cooking, meat buying and photography. A bake sale will also be held on Saturday with proceeds going to the County Council for county projects.

Miss Hinkel said the purpose of 4-H Expo is two-fold. One purpose is to "promote 4-H and show outsiders what it is about and to explain how we try to meet the needs of youth wherever they have needs." But an equally important purpose, she said, "is to expand the limits of our own members and get them working together on a county

Members of the Landisville Klassy Klippers Klub are from left Sandy Arnold, Nancy Weaver and Nancy Mays. cut out letters to be used on their exhibit. Members

Gary Akers (left) and Greg Landis work on the exhibit for the dairy clubs.

the beginning of 4-H, 1900; the McCormick Reaper, 1851; the first railroad in Lancaster, 1834; and others.

With the increased interest in economizing in all areas, the Landisville Klassy Klippers Klub chose to do their exhibit on the economies of home sewing. It will be called "4-H Sewing Makes Cents," and the major theme of the exhibit will be comparing the cost of a home sewn skirt and blouse to a purchased outfit of like style and quality.

Mrs. Earl Mays, Lancaster, organizational leader for the club, said they decided to do this exhibit not to criticize the clothing industry, but to point out some of the advantages of home sewing. "The big thing," she said, "is the price. Sewing your own saves labor which accounts for a large part of the price of a purchased garment." Other advantages of sewing your own, Mrs. Mays said, is "the choice of fabric and color. But the biggest incentive remains the cost."

Mrs. Mays added that her club has grown tremendously in the last few years, reflecting a greater interest in sewing. She said, "We have a lot of nine-year-olds each year, which must mean mothers are interested in having their children learn to sew."

June Grube, Manheim R6, president of the club, explained why the girls took the trouble to make an exhibit for the 4-H Expo. She said, "Yes, it's a lot of work, but it's our responsibility as a club to make county projects go."

If you've been thinking about joining a 4-H club or would like to become a volunteer leaders, make sure you take time to visit Park City next week and get in the spirit. It will be possible to sign up as a member or a leader and it will be a good opportunity to learn about the wide scope of 4-H activities.

4-H Expo will demonstrate how 4-Hers in Lancaster County are working together "To Make The Best Better."

Lynn Cover (left) and Beth Foltz add some finishing touches to "A Living Windbreak," which is part of their forestry exhibit.

Country Corner

with: Melissa Piper
ASSOCIATE EDITOR

4-H Kick-off

With spring around the corner, can 4-H season be far behind? 4-Hers in Lancaster County will be beginning their 1975 4-H season with an Expo display at the Park City Shopping Mall March 13-15.

Nearly 20 4-H groups will be telling the story of 4-H by displays and demonstrations that will range from cooking to animal care.

With the many new projects that 4-H offers today, the youth already involved, are hoping to reach other young people in the area who may not be quite so informed on the program.

If you're in the area, I suggest stopping by to see the display as many 4-Hers have put much time and effort into their displays!

"Almost Heaven"

If you've heard John Denver's folk song "Country Roads" you know that he described West Virginia as "almost heaven." Well the folks down that way are inviting you to see their state first hand while enjoying their annual Mountain Heritage Arts and Crafts Festival which will be held June 6, 7, 8 at Harper's Ferry.

The Festival is unique in that the participants are rigidly screened to provide only the best in the old arts and crafts and to avoid an over abundance of repetition.

Some of the crafts to be demonstrated include vegetable dying, wool spinning, wood carving and apple butter making.

Admission is \$2 per person which includes parking and \$1 for children 6-17. Harper's Ferry is located about 1 hour from Baltimore. For more information write the Mountain Heritage Festival, Jefferson Co. Chamber of Commerce, 200 E. Washington St. Charles Town, W. Va. 25414.

event. This will show that there is more to 4-H than just individual clubs working on a local level."

Presently there are nearly 3500 members in 4-H clubs in Lancaster County, with 350 adults serving as volunteer leaders in 76 clubs. There are 5000 projects being taken, with a variety of 100 projects available to 4-Hers.

Although 4-H week is traditionally celebrated in the fall, Miss Hinkel said it is hoped that 4-H Expo will act as a "kick-off" for spring activities. She said, "Since most of the county clubs are just now getting organized, this will serve as an incentive to get new members and leaders, and get them involved in the program from the beginning as we approach the more active time of the year."

One exhibit which is sure to attract interest is called "A Living Forest," and was designed by Lynn Cover and Beth Foltz, members of the Mountville 4-H Community Club with the assistance of their leader, Leroy Reitz, RD Washington Boro.

Beth and Lynn are the only members taking the project and they said they chose it because they enjoy growing things. They have learned to identify trees without leaves, as well as learning about the various aspects of the forest. Their club requested that they prepare the exhibit for Expo because this forestry project is unique in the County.

The exhibit is divided into several parts and shows "A Living Forest," "A Living Windbreak," and "A Living Calendar."

The girls have constructed a miniature forest in an aquarium which shows the distinct layers found in the forest - including the canopy, the understory, shrubs and herbs, which is both flowers and grass. They also will show the floor of the forest, both the top soil and sub soil.

Lynn described the purpose of using a windbreak around your home or farm, saying that it conserves fuel, attracts birds, slows down the wind and beautifies your property. She added that a windbreak should be on the north or west sides of a home for maximum effectiveness. The third part of this exhibit is a cross section of a branch of the old sycamore tree located near the Centerville Road, reportedly the oldest living tree in the state.

The concentric circles which designate the age of a tree will be easily visible, and important historical dates over the past 200 years will be noted on the cross section. Among dates to be included on the growth of the tree are the introduction of hybrid corn, 1933; World War I, 1918;

Home on the Range

Although most people appreciate a thick juicy steak or pot roast with gravy, the cost of meat these days has caused many consumers to look at other "low cost" cuts of meat for protein.

Variety meats such as the

heart, liver, kidney sweetbreads and tongue are often cheaper to buy than the choice cuts and can offer some interesting menu changes for the family.

This week we are featuring some recipes that have been developed especially for

variety cuts of beef, pork, lamb and veal. We hope you will enjoy trying some of the recipes or sharing them with your friends.

The recipes came to our attention from a pamphlet entitled "Variety Meats," published by the National Livestock and Meat Board in Chicago.

xxx

Liver Loaf with Carrots

2 pounds of sliced liver
2 tablespoons cooking fat
1 small onion
1/2 cup pork sausage
2 eggs, slightly beaten
1 cup milk
1 1/2 cups soft bread crumbs
1 teaspoon salt
2 large carrots cooked
Cook liver in cooking fat until lightly browned. Grind liver and onion, combine with sausage, eggs, milk and bread crumbs. Season and cut the carrots into 3 lengthwise slices. Pack about one-third of the liver mixture on the bottom of a greased loaf pan. Lay 3 slices of the carrot lengthwise on top. Cover with another layer of the liver mixture, 3 more

carrot slices and top with remaining liver mixture. Bake in a slow oven at 300 degrees for 1 hour. Makes 6-8 servings.

xxx

Heart Fricassee

1 small beef heart or 2 veal hearts
flour
1/4 cup cooking oil
1 teaspoon salt
1/2 teaspoon pepper
1/2 cup sliced onion
1 cup diced carrots
1 cup canned tomatoes
Wash the heart and remove hard parts if necessary. Slice across grain. Dredge in flour and brown in cooking fat. Season. Add onion and brown. Add carrots and tomatoes and cover tightly and cook slowly 1 1/2 - 2 1/2 hours or until tender.

xxx

Sweetbreads - Canadian Style

1 pound sweetbreads
1 quart water
1 teaspoon salt
1 tablespoon vinegar or lemon juice
5 slices of canadian - style bacon cut 1/4 inch thick
6 pineapple slices
2 tablespoons butter or margarine melted.
Wash sweetbreads. Add water, salt and vinegar or lemon juice. Simmer 20 minutes. Drain. Remove

membrane and divide sweetbreads into 6 servings. Place bacon slices and pineapple on broiler rack. Insert broiler pan and rack so the surface of the meat and pineapple is about 3 inches from the heat. Broil 4 minutes and turn meat and pineapple. Arrange a slice of bacon on each pineapple slice and top with sweetbreads. Brush with butter and continue broiling for 3 to 4 minutes or until lightly browned.

xxx

Kidney Stew

2 pounds kidneys
1 cup water
2 large bouillon cubes
2 large onions, diced
1 teaspoon salt
pepper
4 carrots, diced
1/4 cup lemon juice
2 tablespoon flour
cooked rice
Remove tubes from kidneys and cut into 1 inch

pieces. Add water, bouillon cubes, onions and seasonings. Cover tightly and cook slowly for 1 1/2 hours. Add carrots and continue cooking until tender. Add lemon juice then thicken with flour mixed with water to form a smooth paste. Serve in a ring of cooked rice.

xxx

Royal Tongue Salad

2 cups (1 pound) cooked tongue
1 cup diced celery
1 cup pitted Bing cherries
4 hard-cooked eggs, sliced
1/2 cup pecans
1 teaspoon salt
salad greens
1 cup mayonnaise
Cut tongue into strips. Combine 1/2 cups tongue, celery, cherries, sliced eggs, pecans and salt. Chill thoroughly. Pile in individual salad bowls lined with salad greens. Serve with mayonnaise.

The Economic Waffle-Wich

In these waste-not, penny-counting days, keep food costs lean. Make it low cost, easy to prepare, appetizing, and nutritious. Waffles, a very old form of bread, make a fine-tasting knife and fork sandwich filled with creamy cottage cheese and a hot orangey sauce made with Log Cabin syrup poured over the top. Serve with a fresh green salad and a glass of milk.

Waffle-wich

Cottage cheese
Hot waffles
Fruited Syrup

For each serving, spread cottage cheese on one hot waffle. Top with second hot waffle and syrup.

Fruited Syrup

1 cup maple-blended syrup
1 orange, sectioned and diced

Heat syrup to boiling. Add orange sections, and bring again to a boil. Serve warm. Makes 1 1/4 cups.

Future Homemakers Serve the Community

by: Melissa Piper

"We've come a long way" has been more than just a slogan for the Future Homemaker's Clubs throughout Lancaster County, in fact it has been the theme of their goal in changing the image of their groups.

While the FHA clubs of years gone by were often thought of as those girls who baked cookies for the teachers and constructed costumes for the school play, today's FHA club is reaching out into the community, helping with service projects for the elderly, the middle-aged and children.

For those who are not familiar with the organization—the Future Homemakers of America was founded June 11, 1945 and is an organization to help youth assume their roles in society through Home Economics education in areas of personal growth, family life, vocational preparation and community involvement.

There are six FHA clubs in Lancaster County located at Penn Manor, Garden Spot, Manheim Central, Elizabethtown and Lampeter-Strasburg High Schools. Penn Manor has both a senior and junior organization which are separate clubs.

The youths involved in the FHA clubs are from all curriculums of high school and have had some education in Home Economics or a related field. They engage not only in cooperative club activities and services, but also take on personal goals to serve their families and communities.

Most schools in the county follow the state guidelines in having the girls (or guys) work toward three sets of degrees similar to those of the Future Farmers. To receive the Junior degree, the young person must decide upon and carry out three goals. One to help at home, one for the chapter and one for community service.

A home goal may involve redecorating a room or helping in the kitchen while community service projects range over a wide area of ideas.

Receiving the chapter degree follows with emphasis on expanding the junior goals of service. One young lady at Garden Spot High School didn't limit her service to the community but wanted to help others in the

Members of the Penn Manor Jr. and Sr. Future Homemaker's Club decided to try their hand at making some apple dumplings after finishing a work project for a nursing home.

Officers are from left: Barbara Snyder, Jr. president; Beverly McMichael, Sr. president; Robin Fry, Jr. vice president and Patty Raush Sr. vice president.

Discussing plans for the upcoming faculty tea and mother-daughter banquet are members of the Manheim Central FHA Club from left: Deb Boll, Joyce Martin and Sonda Hershey.

world by collecting clothing for an orphanage in Viet Nam.

The State degree is similar to the others although it requires more attention and expanded personal projects emphasizing family and community service.

Each club elects officers to organize projects and carry out the functions of the FHA group in their school. There are also state officers and advisors who aid in liaison work between the local chapters and the national organization.

Projects and Services

The FHA clubs in Lancaster County are active in many projects not only in their respective school but

also in their communities.

The young ladies of the Manheim FFA club have been busy in their "adopt a grandparent" program. The girls spend their free time at the Pleasant View Rest Home and the Danner Home visiting with the elderly, writing letters for the guests and learning about care for the elderly.

FHA'ers at the Garden Spot High School have been collecting baby clothes and articles for the An Lanc Orphanage in Viet Nam while in the southern end of the county, FHA'ers at Lampeter Strasburg High School prepared baskets of food for the needy and are planning a penny carnival

related subjects.

The girls also often prepare educational displays dealing with topics of home economics not only for school use but also for use at the Farm Show in Harrisburg.

Main Goals

Although the girls involved in FHA learn to work together on many projects, one of the main goals stressed is to learn personal responsibility.

Mary Ellen Gardner, the FHA advisor at Manheim Central High School defined it in this manner.

"The girls learn to accept responsibility through working toward their degrees and by planning personal and community services."

"We are trying to get away from the 'cookie baking' image and stressing personal development for preparation to adulthood."

"One of our main goals," explained Mrs. J. Breneman, FHA advisor at Lampeter-Strasburg, "is to get the girls involved in community work and also to get themselves involved in activities."

at Penn Manor "many new fields that incorporate home economics related ideas are opening up such as textiles and practical nursing."

Mrs. Breneman the Lampeter-Strasburg advisor stated her ideas by explaining, "some of the students can't afford college but do go on to home economics related work in the vo-tech education work. They learn food trades, textiles and practical nursing."

Elaine Barr, Garden Spot's FHA advisor stated, "home economics is not required anymore but many girls find it interesting to study."

girls in the club find some type of work in the field each year."

Whether or not the girls further their education in home economics, FHA offers them an opportunity to learn more about the field and its careers, community service and perhaps most important - personal growth and responsibility.

Much credit must be given to the advisors of the county clubs who spend much time working with the girls and

One of the many service projects that the Garden Spot FHA has been involved in is collecting baby clothing for an orphanage. Members representing the organization are from left: Shirley Ressler, Karen Esbenschade and Martha Hoover.

Many of the girls which do belong to FHA often further their education in home economics related fields either at college or vo-tech levels.

"There are many opportunities for girls in home economics," explained Pat Heffner, senior FHA advisor

their projects. Lancaster County advisors include: Elaine Barr, Garden Spot; Patricia Heffner and Donna Benson at Penn Manor; Mary Ellen Gardner, Manheim Central; Margaret Trotta, Elizabethtown and Mrs. J. Breneman at Lampeter-Strasburg.

Educational displays are frequently created by FHA members in hopes of reaching more students. Putting the finishing touches on a bulletin board

display are members of the Manheim Central FHA Club. They are from left: Jean Nauman, Joan Lapp, Kathy Miller and Marcy Bomberger.

The girls in the Future Homemaker's Club at Lampeter - Strasburg High School work on some prizes for their upcoming children's penny carnival. The young ladies have also been busy working on an Easter Egg Hunt for the Faculty's children. Members are from left: Jean Lamoreux, Julie Steinman, Kandy Krach, Debbie Lamoreux, Kim Krach, Lori Kilheffer, Joan Smoker and Debbie Rohrer.

LADIES, HAVE YOU HEARD?

By Doris Thomas, Extension Home Economist

Set Your Own Housekeeping Standards
Everyone is different in the amount of order, cleanliness, and decorative touches they want in their homes. Some people actually enjoy housework, or some parts of it. Others dislike all aspects. No matter what your attitude about housework, you have to do a certain amount of it. So it is best to do that amount as efficiently as possible.

Sometimes it's necessary to modify your ideas on cleanliness and order with the needs of other members of your family. If you personally don't mind the dust on the record player but it bothers your husband, or if you like dresser tops to be clean but your children keep

their toys there, you will all have to "give in" a little to live together in harmony.

First, you must decide to manage your housework by knowing what you want your house to look like - how neat, clean and attractive. Then you will have to do enough work to see that you can meet those standards and be satisfied that your housework is done for awhile.

If you don't decide at what point you will consider your housework to be finished, you will always have that feeling that you should be doing something more. Don't allow another family's standards to set yours. Only you and your family can decide what amount and type of housekeeping is right

for you.

When you have finished a housekeeping task that you have set for yourself, don't do it again until the next time you have it scheduled. For example, if a few threads appear on the carpet just after you've vacuumed, don't run the sweeper again

until your scheduled day. The carpet isn't really dirty and you could spend all of your time just vacuuming up stray threads.

What Is Inflation?

There is a lot of mystery, myth and misunderstanding about inflation, and even economists disagree on causes and effective cures for this economic malady.

Many people think inflation occurs when things cost more for reasons other than inflation. For example, fruits and vegetables cost more at the beginning or end of their harvest seasons, or when a big portion of a crop has been wiped out by a flood, freeze or other

disaster.

Persons hardly notice when average prices go up by 1 or 2 percent a year. New products at slightly higher prices often have features old ones didn't have. They are improved in some way and, therefore, are worth more.

Wage earners usually offset small price increases because they produce more or get wage increases. Even during periods of inflation, prices of some things will stay the same and others will go down.

Inflation is a rise in the

general price level. Stated another way, it is a decline in the real purchasing power of the monetary unit. In the United States, inflation is a decline in the real purchasing power of the dollar.

In even simpler terms, inflation is a condition of significantly or substantially rising prices. Economists say this country is in a state of inflation when average prices go up 3 percent a year. That means if it takes a dollar and three cents (or more) to buy items that cost a dollar last year - that's inflation.

PLEASE CALL FOR AN APPOINTMENT

Willow Street, Pa.

My Cindy is a busy little person. She gets up at 6:00 a.m. every morning and helps tend the calves and heifers.

There are many extra activities in school which take up her time. A recent one was an illustrated talk on raising a dairy animal. The flute and piano lessons and practice also absorbs lots of time.

But what really devours her time is reading library

books. She usually has eight or ten going at the same time. I really don't see how she does it! If she likes a book, she will read all of the works of that particular author. Upon picking up one of her books, I was intrigued by the thought put forth that eventually everything even up "the rich have their ice in summer but the poor get theirs in the winter." This seems to be somewhat a farmer's creed. If you don't have a good crop or receive a good price, there is always the hope that next year things will be better and even up.

xxx

From my kitchen windows, I now have a sweeping view in three directions of our meadow and the woodland beyond. When there is a breeze the sun sparkles on the water around the island.

The one surprising thing I see from the new room is very large icicles hanging from a rock formation or small cliff on the side of the hill. Apparently a spring allows water to seep through and form a picturesque scene.

A neighbor boy has had a successful trapping season on our farm. He got 6 raccoons, 2 grey foxes and quite a few opossums and muskrats. We weren't as lucky. All the box traps in our haymow caught were a dozen cats and no raccoons

Make a Cherry Pie

Today's consumer can be ready to bake a cherry pie on a moment's notice if she has canned or frozen red tart pitted cherries in her larder. And if she knows about quality, she will know what the U.S. Department of Agriculture grade means. If you see the official U.S. grade name or shield you know the quality of the product you're getting - and that it was officially inspected by USDA. Sometimes the grade name is indicated without the "U.S." in front of it - for example, "Fancy" or "Grade A." A canned or frozen food with this designation must measure up to the quality stated, even though it has not been officially inspected for grade.

If the grade doesn't appear on the label here's what to look for in good quality red tart pitted cherries:

U.S. Grade A canned and Frozen red tart pitted cherries are required to have a good red color, to have good flavor and texture, and to be practically free from pits and defects, such as blemishes.

Grade B has a reasonably good red color, has a reasonably good flavor and texture, and is reasonably free from pits and defects. Cherries for both grades are required to be 9-16th-inch in diameter or larger. For Grade C, quality requirements are slightly lower than for Grade B, and Grade C cherries may be smaller the 9-16th-inch in diameter.

Remember when buying red tart pitted cherries that these are the kind you would use in cooked desserts. For uses where the cherries are not cooked or sweetened, you would need dessert cherries.

Stockman's Cookies

2 eggs
1 cup shortening or lard
½ cup milk
2 cups sugar
2 teaspoons soda
3 teaspoons cream of tartar
¾ teaspoon salt
1 teaspoon nutmeg
flour enough to roll (6 cups or more)

Cream shortening and sugar. Add eggs and milk. Add dry ingredients. Roll dough out with cookie cutters. Decorate cookies if you want. Grease cookie sheets

and set oven at 350 degrees. Bake for 8 minutes.

Chili Con Carne

2 to 3 cups cooked kidney beans
1 pound ground or cubed beef
2 tablespoons chopped suet
1½ teaspoons salt
1 tablespoon flour
1½ teaspoons chili powder
2 cloves of garlic or 1 minced onion

1 cup hot water
2 cups tomatoes
Melt the suet and add garlic or onion. When onion is slightly brown, add the ground or cubed beef. Add flour, salt and chili powder to

meat and blend together. Then add canned tomatoes and hot water. Cover and let simmer slowly for 1 hour adding water if necessary. Add kidney beans and bring to a boil. Serves 6.

Jean Groff

Farm Women Societies

Society 6

Farm Women Society 6 met March 1 at the home of Margaret Haines. Esther Frey and Katie Brandt were co-hostesses.

The meeting opened with group singing and devotions by Miss Haines. She read a poem about childhood memories of springtime and Psalms 123. Members responded to roll call by giving an Easter Bible verse.

Reports were given of the food stand at the sale of Rhoda Risser, and plans for the sale of Mae Gantz on April 12. The State Farm Women presented an emblem for one of our mem-

bers, Anna Mary Miller, who is in the Mennonite Home. Members are invited to the home of Vera Shonk any time after 9:00 o'clock on April 1 to make bed pads. Bring lunch and any old sheets that could be used for the pads.

The program was a humorous talk by Nora Garber of New Holland, who spoke on "Talking and Loving Your Plants into Growing." Necessary ingredients are patience, persistence, and pride.

The bus is not yet full for the trip to the Meyersdale Maple Festival on March 22. Members or non members may call either 367-3082 or 367-5147 for information.

Society 7

Farm Women Society 7 met at the home of Mrs. William Kinzer on Feb. 8. Devotions were led by Mrs. Samuel Wenger. It was announced that the county project for the year will be to buy a piano for the Farm and Home Center.

Mr. Jack Loose of the Lancaster Historical Society showed slides of Lancaster city and county dating from 1802 to the present time.

Hostesses for the meeting were Mrs. Ira Mast, Mrs. Paul Skiles, Mrs. Charles Rohrer and Mrs. Samuel Wenger.

The next meeting will be held at the Presbyterian Church in Paradise on March 8 at 1:00 p.m. A covered dish luncheon will be served to guests, the county officers and Society 24.

Lester Keen will present a program on his collection of lamps.

Society 11

Farm Women Society 11 met at the home of Mrs. Herman Shirk for the Feb. meeting. Devotions were in charge of Hattie Long.

Roll call was answered with the name of a favorite historian. The committees gave their reports. The members are making lap covers and pillows for the Conestoga View and plan for a day of sewing at the Methodist Church in

Quarryville on March 18 at 9:00 a.m.

Current events were discussed by Irene Shank, Dorothy Huber and Verna Shirk. An auction was held and the meeting was adjourned.

The next meeting will be held March 27 at the home of Anna Herr.

Society 24

Society of Farm Women 24 met February 26, at the home of Dr. and Mrs. J. Calvin Wenger, Lancaster.

Nineteen members and their husbands were present at a covered dish and game night. Roll call was "How you met your husband."

The ways and means committee announced the spring rummage sale will be April 8, at Bareville Fire Co. from 8:00 a.m. to 3 p.m. Society 7 has invited the ladies of Society 24 to a luncheon at 1 p.m. March 8, at the Leacock Presbyterian Church. All members are urged to attend.

The next regular meeting will be March 26, at the home of Mrs. Jacob Garber, New Holland. The Program will be on safety.

Society 26

Farm Women Society 26 held their last meeting at the home of Mrs. Howard Sipling, Marietta R1. Mrs. Robert Summy was co-hostess.

Mrs. David Garber had

Consultant, National Dairy Council

The Case For Nibbling
Snacking is a reality of life these days - and in one sense it may be a blessing in disguise. Anyone who is overweight - or especially anyone who feels that snacking causes overweight - will look askance as I say that. But I am not talking about snacking in addition to regular meals. I'm thinking

of snacking, or nibbling, as the new pattern for eating. "Periodicity of eating," as the scientists like to call it, is a fairly new area of research. But snacking is a habit in almost every household. A MARKET RESEARCH study has shown that at-home eating is moving toward the serving of fewer

food items and more so-called convenience foods. Eating is less formal in the home. Seventy-five percent of all at-home meals (in the survey households) were eaten in the kitchen or an adjoining area. Meal-skipping is increasing. Lunch is the meal most often missed.

SNACKING IS UP. In fact, according to the survey, the average person has six to seven food "contacts" per day and heavy snackers (usually children up to 12 and women 25 to 44) have up to 20 food "contacts" per day. Men stuff themselves, especially at the evening meal and at bedtime.

But suppose people snacked, or nibbled some six meals a day or more, but they were small meals, and

really nutritious foods that offer high quantities of nutrients at reasonable calorie levels?

THERE IS RESEARCH, reported in Nutrition Today by researchers Gilbert Leveille, Ph.D., and Dale R. Romsos, Ph.D., of Michigan State University, that indicates that the taking of "three square meals" a day is associated with overweight.

"The behavioral trait," say these researchers, "is the habit of doing most if not all eating at three different, widely separated periods each day. Our experimental evidence indicates that by adhering to mealtimes man has become the architect of his own obesity." The Michigan State research was done with experimental animals and "a few human subjects."

DESCRIBING an "obesity cycle," the researchers added: "The dieting person reduces caloric intake at breakfast and lunch, and rewards himself by eating a full dinner. . . But the body interprets dinner as its one meal per day and prepares for rapid fat formation (storage). Resumption of normal food intake produces a return to original weight, if not more."

Fulton Grange Meets

Fulton Grange 66 met in regular session on February 24, with Master Donald Trimble presiding. The Grange decided to send a resolution to Harrisburg opposing the Sunday Blues law - stores being open for business on Sundays. It was decided to purchase new manuals for Junior Grange 343.

The Master announced the following as the committee for the Turkey Supper to be held on April 5: Mrs. Charles Long, Chairman, Mrs. Thomas Galbreath, Mrs. Ira Welk, and Mrs. Donald Trimble. Tickets will be \$3.25

for adults and \$1.75 for children.

Mrs. James Brown was named as Assistant Junior Matron to assist with Junior Grange. Plans are being made for those interested to attend the regional meeting in Kutztown on March 14.

Lecturer Mrs. Joyce Holloway began the program with everyone singing "Smile, Smile, Smile". Gyles Brown gave a short talk on Medic Alert. The Lecturer then conducted a takeoff on the TV show "Jackpot" with Harry Baker as winner.

Berks Co. Society 5

The 97th meeting of Farm women Group 5 was held February 24 at the home of Mrs. James Batz, Richland R1.

The evening started with a

safety program by Mr. Edmund Kelper from Met. Ed. His topic dealt with safety of homes.

The meeting was opened with Bible reading by the hostess, followed by the Lord's prayer and flag salute.

Nineteen members an-

swered the roll call, "What was your last home accident?"

Pres. Rhea Schoener opened our business meeting. Secretary's report was read and approved and treasurer's report was given and approved.

The President reminded members of the Spring Rally to be held April 30 at the Hershey Motor Lodge and deadline for tickets is April 15.

Calendars were given to every member of the group for the month of March in which there are different sayings for each day of this month. If this saying applies to you, you have to pay that amount. This is a fun project to raise money for our group.

Anna Moyer reported a barn fire on the farm of Clarence Swope, Bernville, R2. The group has volunteered to serve food on Wednesday Feb. 26, when men will clean up the debris.

An invitation was received for a night of entertainment from Group 8 of Lebanon Co. for May 15 at St. Lukes Lutheran Church, Schaeferstown at 7:30.

The Mizpah benediction was repeated followed by the group singing "Brighten the Corner".

Next meeting will be at the home of Mrs. Ray Bicksler, Richland R1, program for the evening is beauty night.

Editor's Quote Book

We have no more right to consume happiness without producing it than to consume wealth without producing it

George Bernard Shaw

Home - Garden Show Set for March 11-15

Spring will make its unofficial entry into Lancaster County next week when the Lancaster Jaycees open their doors to the annual Home and Garden Show.

The event will be held March 11-15 at the Guernsey Barn Pavilion on Rt. 30 East from 6:00 p.m. - 10:00 p.m.

Thomasville 4-H Club

The Thomasville 4-H Club met recently at the 4-H Center near Bair. Dave Norman from the Extension Service office showed a film to members and parents informing them of the many projects and opportunities which are available to all 4-H members.

The American Pledge was led by Carl Anderson, 4-H pledge by Sandy Borrer. Roll call was taken by name, and years in 4-H. Report of the last County Council meeting was given by Jonathan Myers. Members were informed of the following events: Winter Round-up, Officers Training meeting, Teen Leader Lock-In, 4-H Kick Off Week, Family Fun Night, and the next Roller Skating Party Mar. 10. The Flower bulb sale is under way now all orders should be mailed to Jonathan Myers by Mar. 14, 1975.

The next meeting will be held March 25 at the 4-H Center which will be the last sign up for the year. The program will be a dental puppet show.

daily and from 1:00 p.m. - 10:00 p.m. on Saturday, March 15. Admission will be 50 cents, however, many of the exhibitors will be handing out free passes previous to the opening.

A myriad of special events have been planned, including the ribbon cutting ceremony which will take place on Tuesday evening, March 11. Tom Mitchell, the former Baltimore Colt and member of the 49ers football team will be on hand for the ceremonies which will begin at 6:00 p.m.

John Cappelletti, the noted Nittany Lion running back

and member of the L.A. Rams football team, will be on hand for Wednesday's activities.

Throughout the remainder of the week, numerous demonstrations on crafts and floral decorations will be presented by personnel of Stauffer's of Kissel Hill. Other displays will include instruction on plant care and cooking along with bicentennial events.

Allen Tate, first vice-president of the Lancaster Jaycees and public relations supervisor for the Victor F. Weaver Company is chairman of the event.

TRY A CLASSIFIED AD!

Add Flavor to Your Menu - Try A Chinese Dinner

When you are planning your menu, think Chinese and whip up a fitting welcome to the Chinese New Year--the "Year of the Rabbit."

Food, of course, is the basic ingredient in any celebration and the Chinese New Year is no exception. A properly planned Chinese dinner includes at least one fowl, one fish, and one meat dish--complemented with

rice, fruits and vegetables, and nuts--perhaps almonds or walnuts.

According to the U.S. Department of Agriculture, rice, pork, almonds, and fresh citrus are among the many foods that are in adequate or plentiful supply for March. Beef continues plentiful--that means there's more than enough to meet shopper's requirements. Depending on the situation in your local supermarket, it may also mean the price of beef is likely to be lower. In December, while the national average of grocery prices rose 1.2 percent, beef prices did trend lower.

But USDA also points out that seeking lower prices for food is only one way to be a thrifty homemaker. No matter what you are buying--poultry, beef, pork, fresh fruits and vegetables, or canned or frozen fruits and vegetables--it pays to know how to choose good quality food. Try these tips from the U.S. Department of Agriculture.

Beef

Two things are important when you buy beef--the quality grade and the cut. Different cuts vary in tenderness. For any one cut the higher the U.S. Department of Agriculture grade, the more tender, juicy, and flavorful the meat will be. The meat is always inspected for wholesomeness before it is graded.

PRIME grade beef is the best and most expensive. Most cuts of this grade are very tender, juicy and flavorful. CHOICE grade beef is high quality--this is the grade sold in most stores. It is produced in such large amounts that it is often a very good buy. Choice beef will be quite tender and juicy and have a good flavor. GOOD grade beef is not as juicy and flavorful as the higher grades--it is somewhat more lean, but it is fairly tender.

Poultry

Poultry is inspected for wholesomeness and graded for quality. You are likely to find the grade mark on the wrapper, or on a wing tag on chickens, ducks, and turkeys. Grade A birds have more meat and a better appearance than those of the lower grades. There are two lower grades, Grades B and C, but you will seldom see these grades printed on the poultry label.

The grade of the poultry is not a guide to how tender the

bird will be. That depends upon its age. Broiler and fryer chickens and ducklings are more tender than older birds. If the label carries the word "young" or words like "broiler" or "fryer," then you will know that these are young, tender birds. If it says Mature--Mature Duck, for example--then you will know that these are older birds which will have to be cooked with moist heat in order to be tender.

Fruits and Vegetables

Good quality fresh fruits and vegetables look fresh. Don't buy fresh fruits or vegetables that have large bruises, cuts, or spots of decay, even if the price is low. When you trim off the bad part, you may not have enough left to make the purchase a bargain. Fresh fruits and vegetables are usually cheaper and of the best quality when they are in season.

Vegetables

Most canned and frozen vegetables are packed and priced according to quality (grade) even if the grade isn't shown on the label. If a grade is not shown, let your taste be your guide. Try different brands until you find the one you like best.

Grade A or Fancy vegetables are tender, tasty and have the best flavor and color. Grade B or Extra Standard vegetables are slightly more mature than Grade A and have good flavor and color. Grade C or Standard vegetables are very nutritious but may not be as tender or as good-looking as Grades A and B. Top quality vegetables cost the most, but lower qualities are often good buys, particularly when used in dishes where appearance is not important.

Fruits

As is the case with canned and frozen vegetables, most fruits are packed according to quality even if the grade is not shown on the label.

Grade A or Fancy fruits are delicious and full-flavored fruits that look best because of their good color, shape, and size. Grade B or Choice fruits have a very good flavor and color but are not quite as attractive as Grade A. Many canned fruits are Grade B quality. They are good for most uses. Grade C or Standard fruits are not as sweet as Grades A and B and the pieces may be broken or uneven.

Pork

Pay close attention to the

pork you choose at the meat counter. The most important thing to look for is a high proportion of lean (choose pieces with as little fat as possible). Pork should, however, have at least a little marbling (flecks of fat in the lean). For best eating, choose fresh pork that is firm and grayish pink in color.

Here are a few imaginative recipe ideas.

Oyster Sauce Beef

(Ho Yow Ngow Yuke)
1 lb. flank steak, sliced into 2x1x1/4-inch pieces
1/4 cup onion, diced into 1-inch pieces

1/4 tsp. salt
1/2 tsp. sugar
2 tbs. vegetable oil
2 1/2 tbs. oyster sauce
1 tsp. cornstarch
1/4 cup water
1 tbs. cornstarch, blended with 1 tbs. water to make paste

Place salt, sugar, and 1 tsp. cornstarch in a bowl and mix thoroughly. Coat beef with mixture. Add oyster sauce and marinate for 5 minutes. In a wok or skillet heat oil over high flame. Add beef and onions. Toss, cook at high heat 3 minutes. Add water and cornstarch paste. Toss and mix until gravy thickens and has coated the beef and onions. Serves 3.

NOTE: Oyster sauce is made from oysters and resembles soy sauce. It may be purchased at supermarkets or food specialty stores.

Broccoli with Beef
(Ngow Yuke-Gai Lon)
1 lb. broccoli

1/2 lb. chopped flank steak
2 tbs. vegetable oil
1 tsp. soy sauce
1/4 tsp. salt
1/2 cup water or chicken stock
1/2 tsp. sugar
1 tbs. cornstarch, blended with 1 tbs. water to make paste

Wash broccoli and cut the flowerets off the stems. Peel off and discard stringy outsides of stems and then cut stems into 1-inch pieces. In a wok or skillet, heat oil and salt over high flame. Add chopped beef, broccoli (stems and flowerets), and soy sauce. Toss and mix all ingredients rapidly and thoroughly for 2 minutes. Add water (or chicken stock) and sugar. Cover and continue to cook at high heat for 5 minutes. Remove cover and add cornstarch paste. Toss and mix all ingredients rapidly for 2 minutes until thoroughly blended with cornstarch paste. Serves 4.

Egg Flower Soup
(Don Fah Tong)
6 cups chicken stock
1 cup frozen peas
1/2 cup diced canned mushrooms
1/2 cup diced uncooked chicken
2 eggs, beaten
Salt

Place chicken stock in a covered pot and bring to a boil. Add peas, mushrooms and chicken. Add eggs and stir until eggs separate in shreds. Season to taste with salt. Serves 6.

Sweet and Sour Pineapple Pork
(Baw Law Goo Lo Yuke)
1 lb. lean pork, cut in 3/4-inch

cubes
3 eggs, well-beaten
1 cup flour
1/2 tsp. salt
vegetable oil (amount depends on depth of deep fryer)
1 cup canned pineapple chunks, drained (reserve juice)
1 medium green pepper, cut into 1/2-inch pieces
1 tsp. soy sauce
1/2 cup sugar
1/4 cup catsup
1/2 cup vinegar
2 tbs. cornstarch, blended with 2 tbs. water

Combine flour and salt. Coat pork with beaten egg, then roll in dry mixture. Place vegetable oil in a deep frying pan and bring to a boil. Drop coated pork in fat and fry 6 to 8 minutes or until browned and done. Remove pork and drain on paper towel. Keep warm until ready to add to the sauce.

Place soy sauce, sugar, pineapple juice (one-third cup), catsup, and vinegar in a wok. Blend well and bring to a boil. Gradually add cornstarch paste. Boil on high heat, stirring continuously until sauce thickens. Add cooked pork, pineapple chunks, and sliced green pepper. Turn and mix rapidly for about 5 minutes or until all ingredients are very hot. Serves 3 to 4.

SEDIMENT

Sediment is the prime mass pollutant of the world's waterways. Formed mainly of soil and mineral particles washed into streams by storms sediment is a serious pollutant in the U.S. It is estimated that some 4 billion tons of sediment are washed into bodies of water in the U.S. each year.

ORGANIC LIVING

By
Robert Rodale

Education Doesn't End At School By Robert Rodale

Back about 300 B.C., the philosopher Aristotle wrote: "Education is the best provision for old age."

Today, more than 2,000 years later, that axiom is even more true than it was in Aristotle's day. People are staying in school longer and retiring earlier.

The number of years the average man spends working actually started to decline during the 1950's, according to Dr. Seymour L. Wolfbein, dean of Temple University's School of Business Administration, and it's going to continue.

Placed in perspective, Dr. Wolfbein's observations mean that we're all going to have more leisure time. So why not study something that will make you a better person and the world a better place in which to live?

Age is not important. The theory that education begins in kindergarten and ends with a high school or college diploma is being challenged.

The world around us is a schoolhouse while life serves as our teacher, leading us along paths few of our ancestors would have ever imagined.

Alvin Toffler, author of "Future Shock," has noted that traditional schooling is based on the tacit notion that tomorrow's world will be basically the same as today's. But the most useful education recognizes that institutions

- and people - change.

Mrs. Marion Gleason, a research assistant at the University of Rochester Medical Center, is an outstanding example of someone who decided that, despite the lack of a "formal" education in medical research, she could make a viable contribution to that field.

In 1948, when she was "only" 58, Mrs. Gleason was working as a public relations director for Strong Memorial Hospital, in Rochester, New York. She became interested in the accidental poisoning cases that came into the hospital and eventually wound up as a research assistant in pharmacology, even though she had no degree.

Her research led to the publication of a 1,500-page book, "Clinical Toxicology of Commercial Products." That title is impressive, and so are the contents. Today, the book is considered the definitive "poison bible" for use by poison control centers all across the country.

If a local poison center gets a call from a frantic parent whose child has swallowed something, a quick flip through its valuable pages means an immediate antidote.

Mrs. Gleason is a rare example of one who made an outstanding contribution despite a lack of formal education. But schooling has helped many make contributions to society.

My father, J. I. Rodale, found himself back in school one year, taking a geology course with students half his age. He wanted to learn as much as he could about soil and its characteristics. He completed his mission, and put the material to good use later in many of his writings.

By taking advantage of opportunities for continuing education, you can begin to broaden your own horizons. Find out if your school district has an evening adult education program. Many districts offer a variety of courses, ranging from ecology to woodworking to basic writing. The cost is usually minimal and besides, as a taxpayer, you've been paying for the facilities, anyway. Make use of them.

If you have a college or university in your area - and there are few areas that aren't so blessed - take a walk over. Find out what courses it offers when you have the time.

Another alternative is the good old correspondence course. That takes a great deal of self-discipline because there's no one to prod you along, but the results can be

gratifying and make you a better person. Your local library can get you all the information you'll need.

Besides learning something valuable, you might even find yourself earning some extra money on the basis of what you've learned. It's no secret that, with the rate of today's inflation, anything extra is welcome.

There are many ways for you to get an education. Life itself is an education. The important thing to remember is that you have to keep trying. Don't stop learning. That's only for the uneducated.

(Editor's Note: The opinions appearing in "Organic Living" are those of its author, Robert Rodale, an independent columnist. Rodale's comments do not necessarily reflect the thinking of the Lancaster Farming editor or anyone else on the Lancaster Farming staff.)

Consumer Group Will Hear Talk by McHale

Pennsylvania Agriculture Secretary Jim McHale last week announced he will participate in a statewide consumer conference to be held at the Host Inn in Harrisburg on March 23-25.

The conference is being sponsored by Edinboro State College's Institute for Community Services, the state Department of Agriculture, the state Bureau of Consumer Protection and the Conference of Consumer Organizations.

Topics will cover all aspects of the consumer movement, alleged price fixing by large conglomerates, antitrust action and consumer protection.

McHale, scheduled to speak March 23, will discuss the growth of buying clubs and the movement toward farmer - consumer cooperatives.

"The public is beginning to realize that the high prices they pay today in the supermarkets have not been prompted by rising farm prices," said McHale. "In fact, farm prices have been dropping, without corresponding decreases in retail prices."

McHale asserted that "more and more farmers and consumers are making an attempt to meet each other at the marketplace to eliminate the fat in the middle that has blocked farmers from getting a fair price and never given the consumer an even break."

Besides McHale, the list of speakers includes, Joel Weisberg, director of Pennsylvania Bureau of Consumer Protection; Dr. Currin V. Shields, chairman of the Conference of Consumer Organizations; Father Robert McErven, president of the Association of Massachusetts Consumers and past president of Consumer Federation of America; Ruth Yanatta, chairwoman of Fight Inflation Together; Richard Goodman, vice president of C. H. Stuart Company and board member of the Direct Selling Association; Lynn Jordan, president of the Virginia Citizens Consumer Council; and Kimber Wald, deputy commissioner of the Pennsylvania Insurance Department.

Food Production Always Needed

Regardless of what happens to the number or make-up of the world's population in future years, food production will always be the number one industry, for man cannot survive without food and fiber, a solid waste management specialist pointed out during the recent Livestock Day held on The Pennsylvania State University Campus.

Dr. E. Paul Taiganides, professor of agricultural engineering at Ohio State

University, keynote speaker at the conference, predicted that within the next 20 years, we must double our food and fiber production from our land resources.

"To grow this food on ever-shrinking farmlands, we will need to use more chemicals for crop growth and production and dispose of huge quantities of manures on lands which are also being eyed as the depository of all the urban and industrial wastes," he said.

Manure, garbage, sludge, and household refuse can be natural fertilizers and soil conditioners without creating gross environmental pollution, he emphasized.

There has been a great rate of development and application of new technology for food production but very little research or funding for waste management so as to put waste material back into the natural cycle.

"Nothing can be disposed of in earth's biosphere without affecting ecology," the Ohio State professor noted. "Wastes, therefore, must be defined as resources out of place. Nature must eventually assimilate everything that is produced, both product and by-product."

Commenting on the use of agricultural chemicals, Dr. Taiganides pointed out that to grow the necessary food and fiber for the three and soon-to-be six million people on earth without pesticides is absurd. But, despite the great contributions agricultural chemicals have made to assist in feeding the human race, we do not have a license to use them indiscriminately.

"There is no danger of too much of a pesticide in agriculturally-produced food," Dr. Taiganides said. "We are adequately protected from acute

pesticide poisoning arising from eating American foods."

Pesticide levels in humans have not increased in the last 10 years. This is due to the tolerance levels established by state and federal governments. The current issue, therefore, is what should be the pesticide tolerance levels of our wildlife, rare birds, and other animal species threatened with extinction, and for our environment in general, he added.

"We must not waste time and effort denouncing the accusations of ecologists. Instead, we should support educational efforts to make it possible for the average food producer to detect the pest or weed that needs to be controlled and select the right pesticide. Furthermore, application equipment must be perfected so as to apply chemicals at the right dose, at the right time, to the intended target," Dr. Taiganides pointed out.

MARRIAGE

He told her he'd make her happy if it took every dollar her father had. But that's the way things work out. Some men get married because they want a large family—and get one. The wife's. The books on marriage are a big help. Like 'How To Make Your Marriage Work.' Best one of all is 'How To Make Your Husband Work.'

No Retail Buying At Stanford Seed

In our Jan. 25, issue, we reported on the newly constructed Stanford Seed Warehouse and distribution center at Denver R1. Since that time it has come to our attention that many people have visited the center hoping to buy seeds on a retail basis. To clarify any misconception that might have resulted from the article we wish to explain that the center is strictly a

wholesale distribution center with no means for retail sales.

Individual persons are invited to visit the center's test plots to view the various types of seeds and their growth, however the actual seeds must be obtained from local dealers.

For additional information please consult your local seed dealer.

DEADLINE MARCH 12.

Lebanon Co. FFA's Hold Annual Banquet

The annual Parent-Member Banquet of the Little Dutchman FFA Chapter was held on Friday evening Feb. 28, with over 250 people in attendance. The event took place at the Annville-Cleona High School.

The guest speaker for the evening was Alpheys Ruth, chairman of the board of directors, Lehigh Valley Dairies. He told the members what their roles in the future of agriculture might be.

Dr. A. Landis Brackbill Jr., superintendent of the Annville-Cleona School District, also made some remarks concerning the accomplishments of the local FFA members.

Three parents were awarded the Honorary Chapter Degree for their support and interest in the chapter, and the help they gave their sons. They are Mrs. Delores Hitz, Donald Fair and Earl Bucks.

County project book contest blue ribbons were awarded to Jim Dietrich, Jay Bomgardner, Ken Pierce and Kevin Bucks, farming program; Bruce Buffenmoyer and Terry Kreizer, wildlife conservation; Bill Graves, dairy, beef; Rick Kleinfelter, beef, Harold Risser, field corn, and Jo Peters, horses.

Red ribbons were given to Frank Early and Sam

Heagy, farming program, and Jim Richter, Tom Fair and Tom Landis, work experience. White ribbons were awarded to Luke Heagy, Jacob Gingrich, and Chris McFeathers, farming program, Bill DeSantis and Ed Evans, work experience, and Jim Wampler, dairy heifers.

State project book gold awards were presented to Kevin Bucks, farming program; Terry Kreiser, wildlife, and Harold Risser, field corn. Silver awards were given to Jay Kreider, farming program, and Rick Kleinfelter, beef. A bronze award was given to Jim

Wampler, dairy calves.

Keystone Degree medals were presented to Lynn Struphar, Luke Heagy, Kevin Bucks and Tom Fair. Heagy also was presented the leadership award and the DeKalb agriculture award for production.

The snowmobile dealers award was given to Deb Longenecker, Doreen Cooke, Ken Pierce, and Bruce Buffenmoyer. The pumpkin contest winners were Debra Reigle, David LeRoy and Greg Hummer. James Wampler won the Kiwanis Calf award.

Proficiency awards were presented to Tom Fair,

placement in agriculture production; Jim Deltrich, sheep production; Jay Bomgardner, swine production; Sam Heagy, agriculture mechanics; Bill DeSantis, agriculture sales and service; Kevin Bucks, livestock production; Rick Kleinfelter, beef production. Terry Kreiser and Bruce Buffenmoyer, fish and wildlife management;

Frank Early, soil and water management; Jay Bomgardner, Jo Peters and Jim Wampler, public speaking; Harold Risser, crop production; Jay Kreider, dairy production; Reid Hoover, poultry production; Ed Evans, home improvement; Alan Hostetter, star greenhand, and Luke Heagy, star chapter farmer.

Regulations Tightened

The Maryland Department of Agriculture has announced its intent to tighten existing regulations covering the costly disease, Equine Infectious Anemia, commonly known as "Swamp Fever."

Recently the state agriculture agency promulgated regulations which aim to control and contain EIA, which affects horses, ponies, mules and other animals of the equine species. Animals within the state found to be infected with this communicable and incurable viral infection must now be permanently identified and quarantined.

A blood sampling examination, known as the Coggins Test, is the currently accepted veterinary procedure for spotting and confirming the presence of EIA in the

animal. EIA poses no threat to humans.

A further step in the control process would require that horses, ponies and other equines entering the state after April 30, 1975 be certified free of EIA. Evidence of a negative official (Coggins) test, made within 12 months of date of entry, must accompany the animal.

Secretary of Agriculture Young D. Hance has set a public hearing on the proposed regulations for March 18, 1975 at 10:00 A.M. in the Conference Room, Maryland Department of Agriculture, Parole Plaza Office Building, Annapolis, Maryland.

self-propelled convenience
at a fraction
of the cost

Gehl's PCB6000 gives you many of the advantages of a self-propelled forage harvester at a fraction of the cost. You get all the high capacity features of Gehl's biggest pull-type forage harvester mounted to the front of your high-horsepower tractor—spreading operating costs over more crops and more seasons. You're in complete command from your tractor cab seat, with a full view of the operation ahead and behind you. The harvester is carried on its own set of wheels with steering synchronized from the tractor to the chopper for maximum turning ease. Whether your need is for a year-around forage harvester for your own acreages, or for custom work, you'll benefit from the PCB6000's self-propelled convenience and economy at a fraction of the price you'd expect to pay.

Farm Estate Planning Seminars Announced

Who is going to inherit your farm? Real estate values have increased so drastically—will there be enough cash to pay inheritance taxes without selling the farm?

These are only a few of the concerns that will be

discussed at the Regional Farm Estate Planning Seminars scheduled for March 13 and 14, according to Chester County agent Glenn Shirk. The public is invited to attend.

For reservations, Shirk, at 235 West Market Street, West

Chester, Pa. 19380 by March 10 or telephone 215-696-3500.

The March 13 seminar will be held at Trainer's Restaurant, Quakertown, located at the junction of Routes 309 and 663.

The March 14 seminar will be held at the Holiday Inn, Lionville, located on Route 100 about one mile south of the Downingtown exit of the Pennsylvania Turnpike.

The program starts at 10 a.m. and ends at 3 p.m. and is the same for both days. Topics and speakers will be:

"Tax Reduction and Tax Avoidance Considerations"—Mario Montanaro, C.L.U. American National Insurance Company.

"Tax Planning Before and After Death"—Steven

Hurock, C.P.A., Arthur Andersen and Company.

"Legal Aspects of Estate Planning"—Joseph G. Bell, Jr., Esq., Hart Childs Hepburn Ross and Putnam.

"Highlights of the Pension Reform Act of 1974"—Mario Montanaro, C.L.U.

"Planning the Farm Estate"—Kenneth R. Mancini, Vice President, Trust Officer, First Penna. Bank.

"Farm Transfer Arrangements"—Frederick A. Hughes, Penn State Farm Management Specialist.

These seminars are arranged by the Cooperative Extension Service in cooperation with the American National Insurance Company.

Lancaster Horse Show Slated

Box seat reservations for the 42nd annual Lancaster Horse Show, to be held May 16, 17 and 18 on the grounds of the Lancaster County Riding and Tennis Club, can be made with Mrs. Thomas Blank, 1137 Louise Ave. (telephone 394-4258), it has been announced by the chairman of the show, Peter K. Honaman.

The Lancaster Horse Show, one of the largest annual shows in the eastern part of the United States, will be sponsored by the club for the benefit of the Lancaster County Unit, American Cancer Society.

Paul C. Plastino and J.

Donald Fisher, board members of the Lancaster Unit, are serving with Honaman as co-chairmen for the event.

The show will be an A-rated show for hunters, hunter ponies, pure-bred Arabians, Morgans, and three-and five-gaited saddle horses. It will be a B-rated show for fine harness horses and there will be open intermediate and preliminary jumper classes.

General admission tickets can be purchased at the gate. Adult admission ticket cost is \$1.50, child's admission ticket is \$1.00, and a carload can be admitted for \$5.00.

YORK COUNTY DHIA MONTHLY REPORT

January 1975

1045 lbs. of fat and 21,648 lbs. milk was produced in 305 days by Bertie, a registered holstein owned by Sinking Spring Farm to top the month production list. Ivy, another registered holstein owned by David Stewart, Delta R1, was second with 21,534 lbs. milk and 969 lbs. fat. The high herd for January was on 67.3 cows owned by Sinking Spring Farm, York R5, with 52.8 lbs. milk and 2.23 lbs. B.F. daily. The next high herd was that of David Stewart, Delta R1, on 56.3 cows producing 49.9 lbs. of milk and 2.02 lbs. of B.F. daily.

DHIA Officers

Officers of the York County DHIA were elected by the directors at a short meeting at Dairy Day. Leroy Bupp, Seven Valleys R2, was elected President; Robert Smyser, York R1, was elected Vice President and Charles Rauhauser, Admire Rd., Dover succeeds himself as Secretary. Alma Stambaugh serves as the association's treasurer. The Directors are George Rohrbaugh, New Freedom R1, Leo Rutter, Lightner Rd., York; George Knight, Airville R2, Lynn Wolf, Abbottstown R1, Joseph Hushon, Delta R1, and Robert May New Freedom R1, as well as the three officers.

He Called Poland Home As Service

by Bonnie Szymanski
"I was paid 3,000 zlotys a month," said John K. Graybill, Jr., a Manheim R1 resident who spoke recently to the congregation of the Jititz Church of the Brethren, 300 W. Orange St.,

about his two years in Poland as a Brethren Volunteer in Service.

He explained that an attempt to equate his 3,000 zlotys to a monthly salary in this country would be almost futile because of the difference in exchange rates for tourists as compared to resident rates and black market rates, used by almost everyone at one time or another.

A graduate of Lehigh University, Bethlehem, with a degree in chemical engineering, John's main area of concern during his alternative service work in Poland was in agriculture and related fields. According to John, the Polish-American agricultural exchange program was initiated 20 years ago by Professor Pieniazek, a man universally renowned in the field of horticulture.

During his two-year stay, John worked in three different agricultural institutes. He remained in the first city, Skierniewice, for a year. Here, he participated in research which dealt with analyzing food for storage, concentrating mainly on vegetable crops.

Onto Warsaw

After the year at Skierniewice, he moved to Warsaw where he spent six months working on preparations for the then impending International Horticultural Congress,

which would be attended by 1800 scientists from all over the world.

As English was one of the official languages of the congress, John was responsible for correspondence with English speaking persons planning to attend or otherwise connected with the program.

He explained that every day of the six months was needed to prepare for the international gathering; not only is preparation for such an event always complicated and time-consuming, but in a country like Poland, said John, even the most insignificant request gets tied up in miles of red tape.

In Poland, bureaucracy has been developed to a fine art. John was never so aware of the truth of this statement as when he attempted to procure travel visas for visiting surrounding countries. According to John, "They like to make you wait . . . just because."

Although he had few problems obtaining a visa when he wanted to travel to Yugoslavia, as it is one of the

Iron Curtain countries, when he applied for a visa to visit West Germany, he told us, authorities questioned him vigorously, wanting to know where he was going, where he was staying, why he was going there and who he was going to see.

His final six months were spent in research devoted to the study of soils and plant cultivation techniques. Specifically, John spent most of his time working on a bio-chemical and nutritional project. Using rabbits, he attempted to analyze the amount of proteins in different strains of wheat by studying the affect each strain had on the animals' protein content.

Polish Vs. English

Unlike most Western European countries whose citizens usually understand some English even if they don't speak the language, most Poles do not speak or understand English. Consequently, John found himself in a situation where he either had to learn the native language or spend two years talking to himself.

Actually, the people who worked with John were able to speak some English, educated as they were. In fact, they wanted John to speak to them in English so they could improve their command of the language. Of course, at the same time, John wanted to converse with them in Polish so he could become more at ease with the soft-sounding Polish words. Diplomacy reigned supreme: they took turns practicing on each other.

"I took a course in Warsaw that was designed to teach Polish to Americans," said John. "But it was so far away from where I was staying," he continued, "that I often got there after the class had started; so I learned mostly from talking to the people around me. After I learned some Polish, it wasn't hard to converse."

Americans Well-liked

What are they really like, these Polish people? Do they think we're "ugly Americans" like so many other Europeans do?

On the contrary, said John. Americans are particularly

well-liked in Poland because so many of the Poles have relatives in the States. Very often people he met would say to him, "Oh, I have an uncle in Chicago," or, "I have an aunt in Detroit."

But, like so many others throughout the world, Poles also think we are a nation of millionaires. According to John, even those Poles who have had the opportunity to visit the United States see only the abundance of material goods and the wealth.

In fact, the Polish people regard American-made products as the highest kind of manufactured goods. John told us, "Some Poles think it's good just because its been made in America."

Justly proud of their own country, they never tire of telling visitors that Copernicus, Madame Curie and Chopin were Polish. Said John, "They have statues of Copernicus and signs with his picture all over. They even have his picture on a 10 zloty piece."

John attended a few operas while he was in

BIGGER INCOME Friendly First Certificates

With as little as \$500, you can invest in Friendly First's Certificates of Deposit the big money makers! With a larger investment, you can arrange interest payments for a planned income program.

- Highest interest rates allowed by law.
- Interest rate guaranteed for life of certificate.
- Interest compounded continuously for biggest possible annual yield.
- Certificates insured up to \$40,000 by the Federal Deposit Insurance Corporation.

Look at this chart! It shows the wide choice of certificates with options to suit your needs:

Rate%	Interest Payments	Minimum Deposit	Maturity	Annual Yield*	Rate%	Interest Payments	Minimum Deposit	Maturity	Annual Yield*
5 1/2	Maturity	\$ 500	6 mos	5.63	7 1/4	Monthly	5000	48 mos	7.27
6	Semiannually	500	12 mos	6.15	7 1/4	Quarterly	2500	48 mos.	7.39
6	Maturity	500	12 mos	6.27	7 1/4	Semiannually	1000	48 mos	7.46
6 1/2	Monthly	5000	30 mos	6.51	7 1/4	Annually	1000	48 mos	7.62
6 1/2	Quarterly	2500	30 mos	6.62	7 1/2	Monthly	5000	72 mos	7.51
6 1/2	Semiannually	500	30 mos	6.68	7 1/2	Quarterly	2500	72 mos	7.64
6 1/2	Annually	500	30 mos	6.81	7 1/2	Semiannually	1000	72 mos	7.72
					7 1/2	Annually	1000	72 mos	7.90

*Federal law and regulations prohibit payment of a time deposit prior to maturity unless three months of the interest is forfeited and interest on amount withdrawn is reduced to the passbook rate

MEMBER F.D.I.C.

Volunteer

Warsaw, and like the Poles, he often found himself watching American-made movies. "The kids there love Westerns," he commented.

Also in the Polish custom, he spent many pleasant hours visiting with friends he had met in the course of his work. "They (Poles) spend a lot of time visiting," he explained. "Especially in the smaller towns; they get together and have tea and cakes. In the larger cities they go to cafes and cabarets."

Remembering the times he spent in homes of friends, John told us, "They treat guests in Poland almost like a king," and explained how dining is much more a part of their social interchange than it is in our country where so often we rush through meals or skip them entirely for more fast-paced pleasures.

Oddly enough, he noticed that most homes were not equipped with stoves or ovens. Instead, they usually had only a hot plate, wood burning stove or cooking unit similar to a deep electric frying pan.

One of The Poles' favorite

forms of entertainment, strange as it may sound to us, is mushroom hunting. John described how, whole families will go out on excursions into the woods with an informal picnic air, and search for mushrooms. He assured us that they are expert at selecting mushrooms and know which ones are poisonous and which are not.

Crossed Border Six Times

"I crossed the (Polish) border six times by train," John reported. We wanted to know if he had any trouble at check points since he was a foreigner from the free world.

"Not really," he answered. "They figure you don't understand the language, anyway. It's necessary to register only your camera and your radio. But when they look at your passport . . ."

He hesitated, then went on to explain how the guards meticulously examine the passports to check if the photograph matches the face. "They look at the passport, then look at you,

He Called Poland Home

(Continued from Page 59)
then back at the passport," to make the moment as dramatic as possible.

Guards even check the bathrooms for potential stowaways and use dogs to uncover anyone who may be hiding underneath the train. These strenuous measures, John noted, are undertaken during border crossings both into and out of the country. With such tight security, it's a good bet the people don't do much talking about their government... or is it? On the contrary: Said John, "They're always talking about politics and complaining about the government. Any conversation, eventually, will turn into a political discussion."

Housing Problems
"The big problem in Poland is housing; you see an awful lot of young married couples living with their parents. John went on to explain that because of the poor housing situation, many couples prefer to wait for marriage; consequently, the average marrying age in Poland is much older than in the United States. "There's a move in Warsaw to build more apartments now," he noted.

As for freedom of movement from one place to another, the only restriction is that one must always report to the police in the district that one has moved

into a particular area.

Asked if he had any plans to return to Poland someday, John immediately answered, "Yes. I'm planning to go back in a few years to see how things have changed and to see some old friends."

"My two years in Poland provided the opportunity for me to exchange ideas with the people and to get insight into the real people in each country (that he visited). It's (the work program) a good way to break down barriers between countries."

Sire Summaries To be Explained

The new U.S.D.A. Sire Summary is one of several methods for evaluating dairy bulls. Larry Specht, Penn State Dairy Specialist will explain this new system to dairymen at a meeting 7:30 p.m., Wednesday, March 12 in the Central Chester County Vo-Tech School cafeteria. The public is invited. The School is located along the Lincoln Highway, east of Coatesville; enter through the Veteran's Hospital gate. The Public is invited.

Specht will also discuss how dairymen can evaluate and choose sires for use in their dairy breeding program. There will be ample time for questions and answers.

Dairy Outlook Summary

Milk cow numbers increased from July through December 1974, the first such rise since 1953. Dairy farmers have reduced herd culling substantially in response to low slaughter cow prices, and the lack of off-farm employment alternatives likely has kept more dairy farmers in business.

Milk production held just above year-earlier levels in January. Farmers have cut back grain and concentrate feeding, thus limiting gains in output per cow. However, low slaughter cow prices

held the drop from a year ago in milk cow numbers to less than 1 percent.

Milk output may remain near year-earlier levels in coming months - perhaps through the first half of 1975. Production later this year will depend to a large degree on feed prices, on milk prices, on the cattle market, and on the general economic picture. If feed prices do moderate, some increase in milk production may occur later on this year.

Milk production on U.S. farms held about steady at 115.4 billion pounds in 1974,

following a 4 percent drop the previous year. After dropping in 1973, milk production per cow rose again last year by about 1½ percent, still below the long-term upward trend. Declines from a year earlier in milk cow numbers slackened during 1974, bringing the drop to about 1½ percent for the whole year.

USDA raised the support level for manufacturing milk to \$7.24 per 100 pounds effective January 4, 1975, up 10 percent from the previous \$6.57 level. The new support is 80 percent of the December parity equivalent price and 89 percent of the parity equivalent price as of the beginning of the marketing year (April 1, 1974). The new support price will remain in effect through the next marketing year which ends with March 1976. Support purchase prices for butter, American cheese, and nonfat dry milk were upped accordingly. In a companion action, USDA amended the pricing provisions of all Federal orders to bring minimum Class I prices for February and March into line with the higher price support levels.

Farm milk prices rose slightly in January, but at \$8.29 per 100 pounds averaged almost 7 percent under January 1974 prices. Manufacturing milk prices in January picked up with the boosts in price supports, following declines in December. Farm milk prices early this year may average slightly above fourth quarter 1974 levels, but will remain well below year-earlier record highs.

Cash receipts from dairying dropped below a year earlier in the fourth quarter. Meanwhile, production costs continued to climb by a fifth and many dairy farmers reported being caught in a severe cost-price squeeze. In 1974, farm cash receipts from milk and cream marketings totaled some \$9.4 billion, up 16 percent from 1973's \$8.1 billion. Gross dairy income could show smaller gains during 1975.

Wholesale dairy product prices rose in early January following the price support increase. Market prices are likely to hold close to CCC purchase prices through this summer's flush production months.

After dropping last summer, retail dairy prices have shown only moderate seasonal rises. Prices at retail in December 1974 were about 7 percent above a year earlier, about half the growth in all food prices. However, for all of 1974, retail dairy prices averaged 19 percent higher. We can expect to see some further rise in retail dairy prices, but certainly it will be more moderate than in early 1974.

Commercial disappearance of milk in all dairy products increased slightly in 1974. Butter sales closed out last year on a strong note, but cheese showed some weakness. Nonfat dry milk sales declined sharply as users cut back its use, reduced their inventories, and looked to substitutes. Fluid milk sales in major urban markets pulled a little above year-earlier levels by late 1974, following declines of 5 to 6 percent early in the year. Dairy sales may hold close to year-earlier levels in coming months. Retail dairy prices likely will rise more slowly than food prices generally. However, demand for dairy products could be weakened by declining consumer purchasing power, high unemployment rates, and inflationary pressures.

USDA removals of dairy products under the price support program have been running above year-earlier levels since last May. Butter and cheese purchases picked up in January with the higher support levels, while nonfat dry milk removals continue sizable.

Commercial dairy product stocks entering 1975 totaled 5.6 billion pounds milk equivalent, up over a sixth from a year ago. American cheese stocks accounted for most of the rise, with nonfat dry milk holdings also up substantially. Government stocks of butter and cheese remain relatively small, but nonfat dry milk stocks have increased substantially.

Dairy imports have slackened to more normal levels after mid-1974. Imports for 1974 totaled around 2.9 billion pounds milk equivalent, down from 3.9 billion pounds in 1973, but well above the average levels of recent years. Exports of most dairy products remain small, but sizable quantities of CCC-owned nonfat dry milk are being programmed for export under foreign aid programs.

Sumner In New Job at Inter-State

James H. Sumner has been named associate editor and business manager of "Pennmarva" magazine, announced Dr. James E. Honan, general manager, Inter-State Milk Producers' Cooperative, headquartered outside Philadelphia in Southampton.

A native of Centralia, Ill., Sumner received his B.S. in journalism from Southern Illinois University in 1970.

He served as editor of the Salem, Ill., Times Commoner until moving to Pennsylvania in 1971 where he was employed as a staff writer for the Lancaster Intelligencer Journal. In 1973 he was named farm editor of the daily newspaper.

"Pennmarva" magazine is the official monthly publication of Pennmarva Dairymen's Cooperative Federation. Member cooperatives include Inter-State, Maryland Cooperative Milk Producers, and Maryland & Virginia Milk Producers Association. The

James H. Sumner

magazine, with a circulation of over 8,000, is distributed to members, the news media and other related organizations.

The three cooperatives, which represent over 5,500 dairy farmers, annually market over 2.5 billion

House Ag Committee Members are Named

The new chairman of the Pennsylvania House of Representatives Agriculture Committee is Kent Shelhamer, a Columbia County Democrat. Shelhamer is a fruit grower and farmer who was first elected to the House in 1964, where he's been ever since. Shelhamer is a former audit and school director in Columbia County, and is an avid outdoor sportsman.

Other members of the House Ag Committee are:

Democrats
Paul Yahner, R1, Box 165, Patton, 16668; Samuel Morris, R2, Box 360, Pottstown, 19464; William Shuman, 162 E. Madison St., Greencastle, 17225; Francis Gleeson, Jr., 7032 Erdrick

pounds of milk, primarily in the metropolitan areas of Philadelphia, Baltimore and Washington, DC. Inter-State, largest of the three cooperatives, markets over 1.5 billion pounds mainly in the Philadelphia metropolitan area.

Sumner and his wife, the former Ann Bigham, Vandalia, Ill., presently reside at 45 Reliance Court, Telford, Pa.

St., Philadelphia, 19135; Joseph Bradley, 12 S. Hickory St., Mt. Carmel, 17851; Galen Dreibelbis, 100 N. Hill Place, State College, 16801; Ralph Pratt, R1, Maiden Blush Drive, New Wilmington, 16142; Donald Davis, R2, Box 415-A, Uniontown, 15401; Lester Fryer, 402 E. Third St., Boyertown, 19512; Kenneth Cole, R1, Gettysburg, 17325; Joseph Zeller, 747 Frank Ave., Emmaus, 18049.

Republicans

Marvin Weidner, 21 South Hamilton St., Telford, 18969; Reno Thomas, R1, Beavertown, 17813; Walter DeVerter, R1, Box 84, McClure, 17841; Carville Foster, Jr., R2, Seven Valleys, 17360; William Foster, 1245 Bridge St., Seelyville, 18431; Joseph Grieco, 218 Kendal Ave., Jersey Shore, 17740; Roy Wilt, R3, Box 198, Duncansville, 16835; William Klingaman, Sr., 124 E. Broad St., Tamaqua, 18252; Kenneth Brandt, R1, Bainbridge, 17502.

In addition to their home addresses, ag committee members can be reached by writing to them care of the Main Capitol, Harrisburg, 17120.

Ken Herr To Attend Conference

Kenneth Herr, of A. L. Herr & Bro., Quarryville, will be among a select group of farm equipment dealers attending a two-day seminar at the Avco New Idea home office in Coldwater, Ohio.

The Key Dealer conference will be held March 12 and 13, and will include a small group of dealers from the U.S. and Canada. Herr and the other dealers will be meeting with Avco's top management and marketing people to discuss the problems and potentials of farm equipment as they affect both the company and the industry.

ED ESHLEMAN'S WASHINGTON REPORT

As might be expected, much of the mail I have received recently refers to the Nation's economic situation. A running theme in many of the letters is that Federal spending should be cut.

On the other hand, my mail also contains numerous letters from people who want this program or that exempted from any spending cuts. I hear constantly from those who want to see some specific item in the Federal budget not only left untouched when it comes to cutbacks, but in many cases want that particular appropriation increased.

My point is that I seldom hear from anyone suggesting specific spending reductions. Those in favor of cuts tend to deal in general terms while those wanting money spent refer to particular programs.

Maybe what those of us in Congress need to hear more about is what specific things my constituents want reduced. And the specifics should not deal in only the easy answers.

For instance, I'm aware that my District does not back spending for foreign aid, and my votes have been consistently against such expenditures. But if foreign aid was completely eliminated, it would only make a small dent in the \$52 billion proposed deficit.

Another area often discussed for cutting is defense. Here, too, I have supported reductions in the past, and in my time in the Congress the defense portion

of the budget has dropped from nearly 50 percent to under 30 percent. But how much further do we go before we fail to provide adequate military protection for our purely national interests? And, since between 60-70 percent of the present defense budget goes for personnel costs, any sub-

stantial cutbacks are going to end up throwing large numbers of people out of work. Therefore, while some additional cuts may be possible in the military area, that is not the whole answer.

Some will suggest welfare spending as a source for cuts, and again, maybe some unnecessary money can be eliminated from welfare costs. But in a recent vote I was one of only 38 in the House who was willing to take an unpopular stand on the food stamp program because I believed that students and strikers should be eliminated from the program in order to reduce its expenses.

Therefore, the meaty question is where do we begin to cut after we look beyond the more unpopular budget items? And that's where we need some guidance from our constituents. What kind of Federal spending would you prefer to see continued but, if necessary, can do without or, at least, can do with less of?

That is the kind of tough choice that Congress will eventually have to face if Federal budgets are going to get reduced. I, for one, would like to hear from you in the same kind of detail that usually accompanies requests for continued spending or even more spending. If you really believe that Federal expenditures should be cut substantially, the responsibility for recommending where cannot be ignored.

Boots Saddles 4-H Club

The Boots and Saddles 4-H Horse and Pony Club held their Feb. meeting at the Farm and Home Center. President Ray Carmean called the meeting to order and lead the pledges. Laura Allegrati called the roll to which 47 members responded.

Under new business the club's Expo booth was explained. Also a Used Tack and Clothing sale was planned to be held at the Fellenbaum Farm on the Fruitville Pike on March 28-29.

The club will be holding a clinic on April 6 with Bud Gochenauer as the instructor.

The open horse show was discussed. It will be held on April 19 at the Lancaster Riding Club. Robert Gregory, guest speaker, explained the horse bowl and judging team programs and then showed a film on nutrition.

Lori and Pam Sammons gave a demonstration of tack box equipment and its uses.

EVERY WEDNESDAY IS

RD1, Box 498
Mohnton, PA 19540

Twenty-six dollars was bid for this blue agate pot during Saturday's auction at the Hiram Greiner farm along Colebrook Road, near Mastersonville. Said a by-stander, "You don't see those too often; that was in good shape." She added, "I liked it, but not for that kind of money." The old farmhouse seen in the picture will be sold this Saturday along with its 48 acres. Auctioneers for the sale are Rufus Geib and Raymond Miller.

AGWAY

THE TMR FEED PLANT ON WHEELS...

**delivers a balanced bite
to every cow, every feeding**

The Total Mixed Ration (TMR) concept is the best method yet devised for feeding a ration in which every bite is balanced for nutrient content. But thorough mixing is a must. And that's where the Schwartz Mixer Wagon takes over.

It accurately proportions and thoroughly mixes, then transports and distributes nutrients in any prescribed amount and formulation to any spot on your farm. So it's easy to feed the right rations to lactating cows, dry cows, replacement heifers or dairy steers no matter where they're located.

Three models deliver approximately 3 tons, 5 tons or 6 tons

of a 35-pound/cubic foot TMR ration. All feature triple augers that tumble the feed and turn it end for end. Optional hydraulic doors and elevator control make it easy to fill bunk or feeder. Optional electric scale assures precise amount of each ingredient. And there are still other options available.

These machines have met the test of on-the-farm performance

in the northeast and are built for years of feeding service. If you're considering TMR, be sure to have a good look at them. Call your local Agway to find out what TMR and automated mixing-feeding can mean to you and your way of life.
